CSc 120: Introduction to Computer Programming II
MWF 10:00am-11:55am, Saguaro Hall room 225

SYLLABUS: Summer 2018

Course Description
This course provides a continuing introduction to programming with an emphasis on problem-solving. It considers problems drawn from a variety of domains, including Computer Science, and emphasizes both the broader applicability of the relevant data structures and programming concepts, as well as the implementation of those structures and concepts in software. Topics include: arrays, lists, stacks, queues, recursion, trees, searching and sorting; classes and objects; invariants and pre-/post-conditions; incremental program development, testing, and debugging.

Course Prerequisites
CSc 110 or prior programming experience with Python or comparable programming language. Students should be able to decompose simple problems, write short programs (50-100 lines) incorporating simple control and data structures (if, for, while statements; array and list data structures), and test and debug simple programs.

Instructor and Contact Information
Name: Janalee O’Bagy, Ph.D.
Email: jobagy
Office: Gould-Simpson 854
Office Hours: Mon, Wed 1:00pm – 2:30pm (subject to change; see the class website for updates)
or by appointment
TAs: Jonathon Davis (davisj4)
Victor Gomes (victorluizgomes)
Paria Khamsehzadeh (pariak)

Note: The office hours for the TAs will be posted on Piazza the first day of class.

Class website: https://www2.cs.arizona.edu/classes/cs120/summer18

Piazza: piazza.com/arizona/summer2018/csc120

Expected Learning Outcomes
Students who successfully complete this course should be able to:

- effectively decompose simple programming problems into suitable functions;
- comfortably write moderate-sized (100–300 line) programs incorporating a variety of control and data structures;
- implement common data structures such as stacks, queues, linked-lists and trees and use recursive solutions when appropriate;
- implement classes given design guidance;
- use a provided style guide to produce clean, readable code;
- test and debug programs;
- determine the time complexity of simple algorithms.
Absence and Class Participation Policy

Attendance is expected at all lectures. Students who miss class or exams due to illness or emergency are required to bring documentation from their health-care provider or other relevant professional third parties. Failure to submit third-party documentation will result in unexcused absences.

The UA’s policy concerning Class Attendance, Participation, and Administrative Drops is available at: http://catalog.arizona.edu/policy/class-attendance-participation-and-administrative-drop

The UA policy regarding absences for any sincerely held religious belief, observance or practice will be accommodated where reasonable, http://policy.arizona.edu/human-resources/religious-accommodation-policy.

Absences pre-approved by the UA Dean of Students (or Dean Designee) will be honored. See: https://deanofstudents.arizona.edu/absences.

Makeup Policy for Students Who Register Late

Students who register late may not make up any missed work.

Course Communications

Course communications will be made through the Piazza website for this class, at piazza.com/arizona/summer2018/csc120

It is your responsibility to make sure that you are signed up for this class in Piazza and to read postings and announcements in a timely manner. Not doing so is not an acceptable reason for failing to meet any announced changes to assignment specifications or deadlines.

Required Texts or Readings

Readings will be assigned from this book; students are required to complete the assigned readings before class. Students will also be given additional information and resources that will be needed complete their assignments.

In-Class Activities

Our goal is to foster an atmosphere of engagement and collaboration in all lectures. In addition to opportunities to participate in class daily, there will be specific in-class activities that will be graded. These will often be small group (2-4 student) exercises that are directly relevant to the day's lecture topic. Sometimes they will be individual activities, such as quizzes.

Although attendance during lecture is not required and is not a component of the grade, the expectation is that on-campus students will attend all lectures and actively participate.

The in-class activities will be available on the web. Online students will be expected to submit completed activities via Gradescope in the form of a PDF. A PDF may be created by scanning written pages with a scanner or by using a phone or tablet app such as CamScanner.

The graded in-class activities cannot be made-up or replaced by other work. On-campus students may not submit the in-class activities via Gradescope.
Assignments and Examinations: Schedule/Due Dates

I. Programming Assignments

Programming assignments will typically be given weekly. All assignment scores count towards the final grade.

Assignments will generally be given on Wednesdays and will consist of two components: a set of short problems due on Saturday; and a set of larger problems due the following Thursday. Students will receive their grades and feedback by the end of the day on the following Monday.

NOTE: The first week of class will have a different assignment due-date schedule.

Late Days

Each student will be allocated 2 Late Days which may be used throughout the summer session. A late day allows the student to turn in an assignment’s long problem(s) up to 24 hours late. Only one late day can be used per assignment.

Note that late days cannot be used on the short problems.

A late day may not be used on the last assignment.

II. Section Activities

During the regular semester, sections are held as a separate class meeting. During the summer session, the section activities, which are designed to provide further practice with the lecture material, will be done during the lectures as milestones are reached. In-class students will turn in the section activities at the end of lecture. Online students will turn in section activities through Gradescope.

The section activities will be graded for participation, not for correctness. Online students are expected to ask questions on Piazza if they need help with the activities.

III. Midterms

There will be midterms on the following dates:

Midterm 1: June 29, 2018
Midterm 2: July 20, 2018

On-campus students will take the exam during the first half of the lecture (50 minutes). After the test, the normal lecture for that day will continue.

Online students will take the exams using the Examity service. The exams will be available beginning 24 hours before the scheduled exam day. Online students will schedule a 50 minute time period with Examity in which to take the exam. The exam must be completed by the end of the class period (11:55am MST) on the exam day.

On-campus students are not permitted to use the Examity service to take exams.

Make-up exams will not be given except for unforeseeable emergencies, and only when supported by documentation from an appropriate source such as a doctor’s note.

Final Examination

Summer session does not have a separate final exam week. The final will be held at the following time:

Wednesday, August 8, 2018 at 10:00am to 10:50am (in the regular classroom)

Online students will take the final exam using the Examity service. The exam will be available
beginning 24 hours before the in-class students take the exam and must be completed by the end of the class period (11:55am MST) on the final exam day.

University policies regarding final exams can be found here: 
https://www.registrar.arizona.edu/courses/final-examination-regulations-and-information

**Grading Scale and Policies**
Grades will be computed using the following weighting for the graded components of the class:

- 45% Weekly programming assignments
- 5% In-class activities and reading assignments
- 5% Section activities and participation
- 30% Midterms (15% each)
- 15% Final

The weighted scores computed using this scheme will translate to letter grades as follows:

- 90% and above: A
- 80% and above, but below 90%: B
- 70% and above, but below 80%: C
- 60% and above, but below 70%: D
- Below 60%: E

University policy regarding grades and grading systems is available at 
http://catalog.arizona.edu/policy/grades-and-grading-system

**Requests for incomplete (I) or withdrawal (W)** must be made in accordance with University policies, which are available at 
http://catalog.arizona.edu/policy/grades-and-grading-system#incomplete and 
http://catalog.arizona.edu/policy/grades-and-grading-system#Withdrawal respectively.

**Dispute of Grade Policy** All regrade requests for programming projects must be made within one week of when the grade is returned. All regrade requests for exams must be made within one week of when the graded exam is returned.

**Department of Computer Science Code of Conduct**
The Department of Computer Science is committed to providing and maintaining a supportive educational environment for all. We strive to be welcoming and inclusive, respect privacy and confidentiality, behave respectfully and courteously, and practice intellectual honesty. Disruptive behaviors (such as physical or emotional harassment, dismissive attitudes, and abuse of department resources) will not be tolerated. The complete Code of Conduct is available on our department web site.

We expect that you will adhere to this code, as well as the UA Student Code of Conduct, while you are a member of this class.

Classroom Behavior Policy
To foster a positive learning environment, students and instructors have a shared responsibility. We want a safe, welcoming, and inclusive environment where all of us feel comfortable with each other and where we can challenge ourselves to succeed. To that end, our focus is on the tasks at hand and not on extraneous or disruptive activities (e.g., texting, chatting, reading a newspaper, making phone calls, web surfing, etc.). Students observed engaging in disruptive activity will be asked to cease this behavior. Those who continue to disrupt the class will be asked to leave lecture or discussion and may be reported to the Dean of Students.

Threatening Behavior Policy
The UA Threatening Behavior by Students Policy prohibits threats of physical harm to any member of the University community, including to oneself. See http://policy.arizona.edu/education-and-student-affairs/threatening-behavior-students.

Accessibility and Accommodations
At the University of Arizona we strive to make learning experiences as accessible as possible. If you anticipate or experience physical or academic barriers based on disability or pregnancy, you are welcome to let me know so that we can discuss options. You are also encouraged to contact Disability Resources (520-621-3268) to explore reasonable accommodation.

If our class meets at a campus location: Please be aware that the accessible table and chairs in this room should remain available for students who find that standard classroom seating is not usable.

Code of Academic Integrity
Students are encouraged to share intellectual views and discuss freely the principles and applications of course materials. However, graded work/exercises must be the product of independent effort unless otherwise instructed. Students are expected to adhere to the UA Code of Academic Integrity as described in the UA General Catalog. See: http://deanofstudents.arizona.edu/academic-integrity/students/academic-integrity.

Programming assignments must be completed individually; all code you submit must be your own work. You may discuss general ideas of how to approach an assignment, but never specific details about the code to write. Any help you receive from or provide to classmates should be limited and should never involve details of how to code a solution. You must abide by the following rules:

• You may not work as a partner with another student on an assignment.
• You may not show another student your solution to an assignment, nor look at another student’s solution, for any reason.
• You may not have another person "walk you through" an assignment, describe in detail how to solve it, or sit with you as you write it. You also may not provide such help to another student. This includes current or former students, tutors, friends, SLs, paid consultants, people on the Internet, or anyone else.
• You may not post your homework solution code online to ask others for help. This includes public message boards, forums, file sharing sites and services, or any other online system.

If you are retaking the course, you may resubmit a previous solution unless that program was involved in an academic misconduct case. If misconduct was found, you must write a new version of that program.

Under our policy, a student who gives inappropriate help is equally guilty with one who receives it. Instead of providing such help to someone who does not understand an assignment, please point them to other class resources such as lecture examples, the textbook, the IPL, or a SL or instructor. You must not share your solution and ideas with others. You must also ensure that your work is not copied by others, such as making sure to log out of shared computers, not leaving printouts of your code in public places, and not emailing your code to other students or posting it on the web. Please be careful, and contact the instructor if you are unsure whether a particular behavior falls within our policy.

Selling class notes and/or other course materials to other students or to a third party for resale is not permitted without the instructor's express written consent. Violations to this and other course rules are subject to the Code of Academic Integrity and may result in course sanctions. Additionally, students who use D2L or UA e-mail to sell or buy these copyrighted materials are subject to Code of Conduct Violations for misuse of student e-mail addresses. This conduct may also constitute copyright infringement.

The penalty for a violation of the policy is, at a minimum, a reduction in grade; depending on the seriousness of the violation it may be as high as an overall failing grade for the course.

**UA Nondiscrimination and Anti-harassment Policy**
The University is committed to creating and maintaining an environment free of discrimination; see [http://policy.arizona.edu/human-resources/nondiscrimination-and-anti-harassment-policy](http://policy.arizona.edu/human-resources/nondiscrimination-and-anti-harassment-policy)

**Additional Resources for Students**
UA Academic policies and procedures are available at [http://catalog.arizona.edu/policies](http://catalog.arizona.edu/policies)

Student Assistance and Advocacy information is available at [http://deanofstudents.arizona.edu/student-assistance/students/student-assistance](http://deanofstudents.arizona.edu/student-assistance/students/student-assistance)

**Subject to Change Statement**
Information contained in the course syllabus, other than the grade and absence policy, may be subject to change with advance notice, as deemed appropriate by the instructor.
