Topic 10:

Indirect ("Contra") Proofs of $p \to q$

Indirect Proofs - CSc 144 v1.1 (McCann) - p. 1/12

Review of Direct Proofs

To prove a conjecture of the form $p \to q$ by using a Direct Proof, we:

Assume that p is true, and Show that q's truth logically follows.

Reminders:

- If p is actually true, the proof is a sound argument.
- ullet If p is only assumed true, the argument is merely valid.

"Indirect" Proofs

We can replace $p\to q$ with logically equivalent forms to create additional "indirect" proof techniques.

Proof by Contraposition

(a.k.a. Proof of the Contrapositive)

Example #1: Proof by Contraposition

| Conjecture: If $ac \leq bc$, then $c \leq 0$, when $a > b$. | | |
|--|--|--|
| | | |
| | | |
| | | |
| | | |

Proof by Contradiction

(a.k.a. Reductio ad Absurdum)

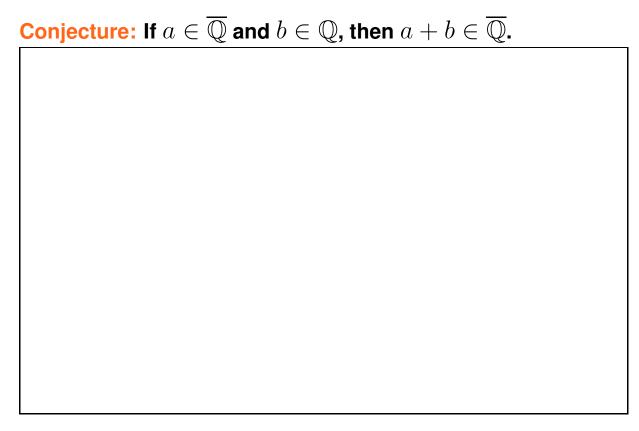

Recall the Law of Implication: $p \to q \equiv \neg p \lor q$

Indirect Proofs - CSc 144 v1.1 (McCann) - p. 7/12

Example #1: Proof by Contradiction

Conjecture: If 3(n-6) is odd, then n is odd.

Example #2: Proof by Contradiction

Indirect Proofs - CSc 144 v1.1 (McCann) - p. 9/12

Example #3: Proof by Contradiction (1 / 2)

Conjecture: The sum of the squares of two odd integers is never a perfect square. (Or: If $n=a^2+b^2$, then n is not a perfect square, where $a,b\in\mathbb{Z}^{odd}$.)

| Example #3: Proof by | Contradiction (2 / 2) |
