No. 2. For Mrs. G. L. Todd

DURABLE-DURHAM Hosiery is a product of industrial democracy—never of child labor. We have no strikes or lockouts.

Lucky is the family with a wise hosiery buyer

More than money can be saved by a hosiery buyer who knows values—who knows the strength and honest quality of DURABLE-DURHAM Hosiery. There is comfort and economy for every member of the family in DURABLE-DURHAM. It wears longer because it is made stronger with good-looking but never flimsy. Darning is avoided. Ask your dealer to show you.

DURABLE-DURHAM HOSIERY

For MEN, WOMEN and CHILDREN

Made strongest where the wear is hardest

Every pair is strongly reinforced at points of hardest wear. The tops are wide and elastic; legs are full length; sizes are accurately marked; and the toes and toes are smooth, seamless and even. The Durham dyes will not fade.

You should be able to buy DURABLE-DURHAM Hosiery at any dealer’s. Look for the trade-mark ticket attached to each pair. If you cannot find this hosiery, we shall appreciate your sending us to the Durham Hosiery Mills, Sales Department, 88 Leonard Street, New York, giving us the name of your dealer.
Films on Teeth

Is What Discolor—Not the Tooth

All Statements Approved by High Dental Authorities

Millions of Teeth Are Wrecked by It

THAT alloy film which you feel with your tongue is the major tooth destroyer. It causes most tooth troubles.

It clings to the teeth and enters crevices. The tooth brush does not end it. The ordinary dentifrice does not dissolve it. So millions find that tooth discolar and decay despite their daily use of a tooth brush.

The film is what discolors—not the teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So brushing does not save the tooth if it leaves that film around them.

After years of searching, dental science has found a way to combat film. For daily use it is embodied in a dentifrice called Pepsodent.

For years have been spent in clinical and laboratory tests. Now leading dentists everywhere are urging its constant use. And we supply a 10-Day Tube to anyone who asks. Thus countless homes have now come to employ this scientific dentifrice.

Your Tube is Waiting

Your 10-Day Tube of Pepsodent is waiting. Send the coupon for it. Trust no one. How can the teeth feel after using.

Mark the absence of the alloy film. See how tooth whiten as the fixed film disappears. You will be amazed at these ten-day results.

Pepsodent is based on papain, the digestive of albumin. The film is albuninous matter. The object of Pepsodent is to dissolve it, then to constantly combat it.

But papain alone won’t do. It must be activated, and the usual agent is an acid harmful to the teeth. So papain long seemed impossible.

Now active papain is made possible by a harmless activating method. Because of patents it is found in Pepsodent alone.

For your own sake and your children’s sake we urge immediate trial. Compare the results with our present methods.

Cut out the coupon now.
