When the hobbles have been strapped off they are for the cleaning by rotary brushes, mounted in radial sides on the plates, and moved in and out by means of cam grooves in fixed end plates. The plates are driven from the shafts, each brush in its own orbit, as shown in the diagram of the plate. When the brush is cleaned this is repeated by using a similar manner by means of cam grooves in fixed end plates. The plates are driven from the shafts, each brush in its own orbit, as shown in the diagram of the plate.
