

CONTENTS.

	PAGE
AN EXPLANATION, - - - - -	17
DESIGNING A LOOM.	
The practical knowledge necessary to the designing of a loom, - - - - -	18
Summary of the principal points to be considered in designing a loom, - - - - -	18
THE DELINEATION OF CAMS AND TAPPETS FOR SHEDDING.	
The distinctive features in a pair of well-constructed cams for plain shedding, - - - - -	20
Geometrical delineation of a cam for plain shedding, - - - - -	20
A peculiarity in a pair of shedding cams and its explanation, - - - - -	22
The difference in size between the two blades of a wyper and method of constructing them for actual work, - - - - -	24
The construction of wipers or tappets for other than plain shedding, - - - - -	27
Why always multiply the number of treads by four in order to find the number of divisions in the circle? - - - - -	28
TOP ROLLER MOUNTINGS.	
The top roller mounting for plain weaving, - - - - -	28
The top mounting for a three-leaf twill, - - - - -	29
The top mounting for a four-leaf twill, - - - - -	29
The treadles—a peculiarity, - - - - -	30
The position of the treadles in the loom for twill shedding, - - - - -	31
How the skewed bevel wheels are made, - - - - -	31
To find the relative number of teeth in the driving wheels for tappet shafts, - - - - -	31

DOBBY AND JACQUARD SHEDDING.

	PAGE
The Dobby machine, what is it?	33
The Jacquard machine,	34
The Jacquard machine explained and illustrated,	34
How the machine is driven,	37
Another arrangement for moving the cylinder,	39
The cylinder reversing movement,	40
The single-lift machine,	42
The double-lift machine,	42
The twilling Jacquard,	44
Jacquard and tappet shedding compared,	48

THE CONE PICK.

The unsatisfactory condition of the movement,	49
Causes that lead to an unsatisfactory movement in the "cone" or "over" pick,	49
The length of tappet considered in relation to the length of picking arm,	50
How the force applied by the tappet should be transmitted to the shuttle,	51
The method of constructing the picking cam,	53
The vertical adjustment of the anti-friction roller,	55
Two methods of driving the loom,	57
The sum of the whole matter,	57

THE UNDER PICK.

The under pick : its advantages over the cone pick,	58
The disadvantages of the under pick and how they are being met,	60
Why always buffalo hide for pickers?	61

BEATING UP THE SHOT.

What actually takes place in the making of cloth in the loom,	62
--	----

**TO COMBINE AND HARMONISE THE THREE
PRINCIPAL MOVEMENTS OF THE LOOM.**

	PAGE
The relative position of the principal parts of the loom, -	64
The rocking shaft, the swords, and the lay, -	65
The cause of so much breakage in the swords, and its remedy, - - - - -	66
The position of the crank shaft in relation to the swords, -	67
The position of the tappet shaft in relation to the crank shaft, the treadles, and the upright picking shaft or spindle, - - - - -	69
The upright picking shaft, - - - - -	71
The end frame, - - - - -	74

THE POSITIVE TAKE-UP MOVEMENT.

Its action, - - - - -	74
The roller covering, - - - - -	75
Driving the take-up movement, - - - - -	75
The arrangement of the wheels in the take-up movement, -	77
A continuous positive movement not wanted, - - - - -	79

THE NEGATIVE TAKE-UP MOVEMENT.

Purposes for which it is better adapted than the positive movement, - - - - -	79
--	----

THE LET-OFF MOVEMENT.

As it is and might be, - - - - -	80
The proper tension of the yarn in the loom, - - - - -	80
The put-back motion, - - - - -	81

**THE YARN PROTECTOR—AUTOMATIC STOP
MOVEMENT.**

Its threefold purpose, - - - - -	82
The momentum of its stroke, - - - - -	82
Its construction and arrangement, - - - - -	83
The length of the protector, - - - - -	84
The fly-reed protector, - - - - -	84

STOP MOVEMENTS WHEN A WARP OR WEFT
THREAD BREAKS.

	PAGE
When they become necessary, - - - -	84

THE SHUTTLE RELIEF MOVEMENT.

What experience has taught about it, - - - -	85
Its purpose, - - - - -	85
What the movement is, - - - - -	85

THE NORTHROP LOOM.

The two distinct methods at present being employed to increase the amount of work produced by machinery, - - - -	87
The principal feature in the "new loom," - - - -	87
The weft changer considered in relation to the other automatic movements, - - - - -	88
Some of the new automatic movements, - - - - -	90

HIGH SPEED LOOMS.

Is the power-loom being driven as fast as it can be with economy? - - - - -	90
What is necessary in a high-speed loom? - - - - -	91
A practical hint as to increasing the speed of looms employed in the jute trade and the making of other coarse fabrics, - - - - -	92

MAKING THE LOOM.

How a well designed loom can be spoiled in the making, - - - -	92
How the frame-work should be fitted, - - - - -	93
Gauge and jig in loom making, - - - - -	93

THE WEAVING SHED.

The model loom factory, - - - - -	94
The columns, - - - - -	94
With the shafting underground, - - - - -	96

DRIVING THE POWER-LOOM.

	PAGE
The distribution of power from the generating station to the loom, - - - - -	96
What has been done in the past to get a steady movement for the power-loom, - - - - -	97
What is being done and what may be done to lessen the vibration on the line shaft, - - - - -	100
The ideal method of driving power-looms, - - - - -	102

SHAFTING, PULLEYS, LEATHER BELTS, AND ROPES.

Driving power-looms, - - - - -	102
Fixing the main shaft brackets, - - - - -	103
Erecting the shafting, - - - - -	103
Levelling the pillow blocks, - - - - -	104
Drums or pulleys, - - - - -	104
To find the unknown quantity in pulleys, - - - - -	104
To find the circumferential velocity of pulleys, - - - - -	105
The fast and loose pulleys and the friction pulleys—where each can be employed with most advantage, - - - - -	105
The convexity of pulleys, - - - - -	106
Belts—their width and thickness, - - - - -	106
How the lap-jointed belts should run—the length of lap, - - - - -	107
A belt clamp, - - - - -	107
The necessity of squaring the ends of a butt-jointed belt, - - - - -	109
How a butt-jointed belt should be laced, - - - - -	109
The management of belts, - - - - -	110
How to get the most power out of belts—the direction in which they should run, - - - - -	111
The construction of rope pulleys, - - - - -	111

ERECTING AND FIXING LOOMS IN THE FACTORY.

How the parts of the loom should be marked, - - - - -	113
How the main wheels should come into gear, - - - - -	113

	PAGE
The arrangement of the looms, - - -	114
The main points to be observed in fixing looms to the floor,	116
Another method, - - - - -	117
A template necessary for this work, - - -	118
To find a proper bearing for the loom, - - -	119
Points necessary to notice before starting the loom, -	119

WORKING THE LOOM.

THE MECHANICAL DEPARTMENT.

Some practical points worth noticing, - - -	119
To the young student, - - - - -	121
The loom "knocking off"—to find the cause, -	122
The causes that make the loom knock off, - - -	123
When the loom knocks off from a deficiency of power, -	123
When the loom knocks off from an obstruction to the shuttle,	124
When the protector is at fault, - - - - -	125
The value of the ear in detecting what is wrong, -	125
Causes that throw the shuttle out of the loom, -	125
The main principle that should guide the mechanic, -	126
Some things to be guarded against, - - - - -	126

WORKING THE LOOM.

THE TENTING, TACKLING, OR TUNING DEPARTMENT.

The power-loom tenter's work, - - - - -	127
Tackling, - - - - -	128
The most important point in cloth making, - - -	129
Spreading the warp threads—what actually takes place amongst the yarn to cause the threads to spread— how it is done, - - - - -	129
What part the shedding cams or wipers play in making good cloth, - - - - -	131
The lease rods—the part they play in making good cloth, -	131
The tension at which the yarn is held, and the adjustment of straps and cords, - - - - -	132

JACQUARD WEAVING.

	PAGE
Shedding with the Jacquard machine, - - -	133
Setting the machine to the comber-board, - - -	134
Setting the cylinder, - - - - -	136
Mounting the harness, - - - - -	136
Preparing the lingoës, - - - - -	136

SOME DETAILS THAT SHOULD BE KNOWN BY ALL
CONNECTED WITH WEAVING.

A peculiarity in the construction of the shuttle, and the reason for it, - - - - -	137
Management of the picking movement, - - -	138
The use of the check-strap, - - - - -	139
The intermediate or patent selvage—how it is formed, -	140

HOW THE PATTERNS IN THE CLOTH ARE
PRODUCED.

Tappet, Dobby, and Jacquard shedding, - - -	143
Plain cloth, - - - - -	144
Setting the heddles to the reed, - - - - -	145
Regular twills, - - - - -	146
The same twill with the draughts reversed, - - -	147
How the pattern should be turned, - - - - -	147
Irregular twills, - - - - -	148
Common twills that are equally flushed on both sides of the cloth, - - - - -	148
The combination of common twill and plain cloth, - - -	149
How the draughts and treading form the patterns in the cloth, - - - - -	150
How the patterns are produced by the Jacquard machine, -	152
How the cards are found and cut from the sketches, -	154
A striking peculiarity in linen damask cloth, - - -	155

TEXTILE CALCULATIONS.

	PAGE
The different standards or bases of calculations used in different localities, - - - - -	155
The "setts" or "porters" of the reed, - - - - -	156
The calculation of warp yarns, - - - - -	158
To find the weft, - - - - -	159
An example showing how to find the quantity of warp and weft in any given piece of cloth of any material, -	160
To find the weight and cost of yarns, - - - - -	161
Considerations that must be taken into account in deter- mining the price of cloth from that of the yarn, -	162
