

Another book from the Women's Institute of Domestic Arts and Sciences has been scanned onto this site: *Sewing Materials*. Although *The Library of Dressmaking* will be found to contain some of the same articles, either the same or expanded upon, the majority of the work in this book is new and contains a great deal of very useful information for weavers, stitchers, and lacemakers.

The title is a bit misleading, as this is really a mini-encyclopedia of textiles and contains many useful tips for working with woven materials. Of special interest is the very complete "Definition of Useful Terms" at the back of the book.
