OSWALD LEVER
(Formerly LEVER & GRUNDY)
LEHIGH AVENUE and MASCHER STREET
PHILADELPHIA, PA.

Manufacturer of Machinery
For
Spinning, Weaving, Knitting, Rope, Cordage and Lace Mills.

Loom Filling Winding Machines
For
Cops, Butts, Bobbins, Quills or Tubes, for any kind of yarn used in
weaving, from the coarsest burlap to finest silk goods.

The Filling, Cop and Butt Winding Machines for Carpets, Duck Cloth,
Blankets, Plushes, Ticking, Awnings, Bed Spreads, Etc., we have been making
and supplying for years to the mills, where the object has been to get as much
yarn as possible in Shuttles.

We have also supplied this class of winding machines to silk mills, to wind
the cotton filling used with silk, wound in cop form, or on small butts, or on quills
up to 9 inches long.

Full Line of Machinery
For
Winding Cops, Butts, Bobbins, Quills, Paper Tubes, Knitting Bobbins,
Coneing Machines, Presser Drum Spooling Machines, Spindle
Spooling Machines, Warping, Dressing, Beaming,
Reeling and Chenille Cutting Machines.

Brass Bobbin Winding, Warping, Spooling and other
Machinery for Lace Mills.

When needing or likely to need machinery of the kind we make,
please write.

OSWALD LEVER.
Houghton's
Improved Steel Thread Boards
With Hardened Thread Guides
And Metal Back Rail

Patented Nov. 8, 1897; March 8, 1898; July 1, 1901; Nov. 9, 1901; June 9, 1903; March 1, 1904; Aug. 23, 1904, and other patents pending.

The only Thread Board that holds a Thread Guide solid all the time.

The guides never get loose.

Are always in perfect adjustment central to the spindle,

Thereby saving "Travelers," "Broken Ends."

Saves waste and care, and the rings wear longer.

Those who have used this Steel Thread Board say: "I know that I am getting considerable more yarn."

Largely increases production, in some instances 5 per cent. Reduces cost of labor 25 per cent.

No mill, "Rich or Poor," can afford to run without this Steel Thread Board.

For a description of this Thread Board, etc., see pages 101, 102, 103 and 104.

TEXTILE CALCULATIONS,
A Complete Guide to Calculations relating to the Construction of all Kinds of Yarns and Fabrics, for the analysis of Cloth, Speed, Power and Belt Calculations,
For the use of Students, Operatives, Overseers and Manufacturers,

BY E. A. POSSELT,

In One Vol. Quarto. Handsomely bound in Cloth and Gold. 186 pages. Numerous Illustrations. PRICE, TWO DOLLARS.

ABSTRACT OF THE CONTENTS.

YARN AND CLOTH CALCULATIONS.

Grading of the Various Yarns Used in the Manufacture of Textile Fabrics According to Size or Counts—To Find the Equivalent Counts of a Given Thread in Another System—To Ascertain the Counts of Twisted Threads Composed of Different Materials—To Ascertain the Counts for a Minor Thread to Produce, with Other Given Minor Threads, Two, Three or More Ply Yarn of a Given Count—To Ascertain the Amount of Material Required for Each Minor Thread in Laying out Lots for Two, Three or More Ply Yarn—To Ascertain the Cost of Two, Three or More Ply Yarn—To Find the Mean or Average Value of Yarns of Mixed Stocks—Reed Calculations—Warp Calculations—Filling Calculations—To Ascertain the Amount and Cost of the Materials Used in the Construction of all Kinds of Plain and Fancy Cotton and Woolen Fabrics.

STRUCTURE OF TEXTILE FABRICS.

The Purpose of Wear that the Fabric will be Subject to—The Nature of Raw Materials—Counts of Yarn Required to Produce a Perfect Structure of Cloth—To Find the Diameter of a Thread by Means of a Given Diameter of Another Count or Yarn—To Find the Counts of Yarn Required for a Given Warp Texture by Means of a Known Warp Texture with the Respective Counts of the Yarn Given—Influence of the Twist of Yarns upon the Texture of a Cloth—To Find the Number of Ends Per Inch in Required Cloth—Weaves which will Work with the Same Texture as the 1/1, Twill—Weaves which will Work with the Same Texture as the 3/2, 1/3, etc., Twill—Selections of the Proper Texture for Fabrics Interlaced with Satin Weaves—Rib Weaves—Corkscrew Weaves—Two Systems Filling and One System Warp—Two Systems Warp and One System Filling—Two Systems Warp and Two Systems Filling.

ANALYSIS.

How to Ascertain the Raw Materials Used in the Construction of Textile Fabrics—Microscopical Appearance of Fibres—Tests for Ascertaining the Raw Materials Used in the Construction of Yarns or Fabrics—How to Ascertain the Percentage of Each Material Constituting the Fabric—How to Test the Soundness of Fibres or Yarns—How to Test Given Counts of Yarn—How to Ascertain the Weight of Cloth—How to Calculate the Weight—How to Test and Analyze the Various Finishes—Cotton Spinning.

SPEED, BELTING, POWER, ETC.

Speed—Belting—Water Power—Steam Power—Heat.

DOUBLE RIB LINKS AND MOULDS
SPECIAL WORK OF ALL KINDS

Geo. W. Lindley, Prop., 5120 Wakefield Street,
GERMANTOWN, PHILADELPHIA, PA.
TO THE KNIT GOODS MANUFACTURERS.

You will certainly do your best to give entire satisfaction to your customers, that they might keep you busy for the following years. You want to manufacture high-grade goods, produce in large quantities and at cheap rates, that you might get good benefit out of same, without raising your prices to a forbidding point.

All this is only possible if you have an up-to-date plant; you can do it only on first-class and improved machinery.

Are you better off than your competitor, is your plant fitted to do the work well? If not you have to consider and make at once the necessary improvements. The longer you wait, the harder it will be. Your competitors will find out the weak points of your manufacturing system, will attack and beat you there, and have the best of you in the struggle for orders. This concerns you.

If you intend to enlarge and improve your plant, to invest new capital in machinery, do not waste it, invest. To enable you to do so you will have to buy the best machines in the market, as the best only is the cheapest; you will have to get the most improved machines and from a manufacturer who has a reputation in the country and takes care to keep the same. He will give you the advantages of a long and expensive experience free to you in providing you with machines for most regular goods, with largest production for first-class work.

Now-a-days the mechanical work spares capital, spares wages; give the engineer a chance to put you in position to save your capital in reducing your manufacturing expenses.

Consider carefully all the necessities of your plant and your line of business; if your order is ready, see that the machines you are going to buy will respond to the following capital points:

I. Are they built well, strong enough and of selected materials; will they not be subject to rapid wearing out and expensive repairs?

II. Are all your needs considered, can the machines be operated by workmen without special training?

III. Can the machines be used with advantage for other articles, if the selling of the goods you actually make will drop, and the market opens for new styles?

IV. Are the movements of the machines so independent that any combination of same for various patterns, etc., will be possible?

V. Are the parts, cams, etc., interchangeable, and can you get same at once if you need any, or will you be compelled to stop your machines for weeks until they can undergo repairs?

VI. Will there be an experienced man to help you out of trouble if your own employee cannot go further?

VII. Will the factory building the machines be able to deliver same in time for the season?

Before ordering the machines, let them undergo this examination.

In buying a "GROSER" Machine, you are sure not to be disappointed; it will be what it is sold for, make what it is claimed to do.

Different machines can be seen in operation, in factories and show-rooms. Large stock in hand and full automatic power machines. All parts, needles, etc., always kept on hand. Engineers and machinists at the disposition of the buyer.

See advertisement on next page.

Large production, irreproachable work and high grade goods recommend these latch needle flat knitting machines. Special constructions for all purposes in flat and circular work for plain and fancy goods. Machines to be operated by hand power or steam.

The "Grosser" Jacquard Power Machine M. M. G., 2 sections.
(Honeycomb or Pineapple patterns combined with any fancy design.)

Absolutely automatic in all movements.
Reliable in its work and regularity.

Practically unlimited in variety of patterns.

All kinds of full automatic flat knitting machines operated by power for plain and circular work, (Sweaters, Jackets, Ladies' Blouses, Sporting and Athletic Goods, Union Suits, Rib Caps, Gloves, Stockings, etc., etc.) Full fashioning machines (automatic widening) for pants, sleeves, etc., in flat and circular work. Absolutely independent heads, latest improvements. Selected materials, best construction, long experience, skilled workmen. Interchangeable parts.

Largest and best assorted Stock in all special machines, needles, parts and supplies. Lowest prices, easy terms, prompt delivery. Write for catalogue and all particulars.

Large show room. Machines to be seen in operation. Samples at your disposition.

(447)
GREEN'S ECONOMIZER has fulfilled the above emblem in the power house of every textile mill, bleacher or dye house wherein it has been installed. We can do this for you—

Save 10 to 20 per cent. in fuel.

Increase steaming capacity of present plant 10 to 15 per cent.

Save cost of labor in handling 10 to 15 per cent. of present fuel supply—cost of handling ashes also.

Prevent expansion and contraction of boilers, thus prolonging their life.

Give you a large volume of water above the boiling point always ready for sudden demands for extra power, heating the mill in winter, or other purposes.

What we claim to do here has been demonstrated in hundreds of textile mills.

We will be pleased to forward our catalog, which explains other advantages.

The Green Fuel Economizer Co.

SOME SCIENTIFIC FACTS

OF INTEREST TO TEXTILE MANUFACTURERS.

Textile Manufacturing Goes More Smoothly and Successfully in Certain Climates than in Others.

THE BELL SYSTEM

Reproduces in the Mill any climatic conditions required. It automatically preserves throughout the year the best conditions of the best climates for textile working.

THE BELL MACHINE delivers air carrying moisture as aqueous vapor, just as it is found in nature, which moistens thoroughly and uniformly. Being SELF-REGULATING it does not keep on moistening when further moistening is useless.

Water delivered as a mist wetted rather than moistened; settles on the surface in fine globules instead of being absorbed at once into the fibres. For further particulars address

BELL PURE AIR & COOLING CO.

97 CEDAR STREET, ... NEW YORK, N. Y., U. S. A.

JAMESTOWN, N. Y., Oct. 27, 1904.

CLING-SURFACE CO., Buffalo, N. Y.

GENTLEMEN:—The data herewith explains the conditions of the belts you have photographs of.

Our engine is 1000 H. P. The belts run from two 20 ft. pulleys (63 R. P. M.) to two 31” pulleys (450 R. P. M.) The large belt is 40” face, double leather, on 45 ft. centers. The shorter belt is 40” face, also double leather, and on 35 ft. centers. The two belts were doing 500 H. P. when photographed and could do much more. I have used Cling-Surface here for five years, and am entirely satisfied with it. These belts are clean, not sticky, pliable and in fine condition and the larger is running with a sag of 4 ft., while the smaller is 23” slack. I believe in slack belts and Cling-Surface permits me to run them so.

Yours very truly,

W. H. COBB, Chief Engr.
Broadhead Worsted Mills.

Five Years’ Use in the Broadhead Mills

THese big belts are a good example of what Cling-Surface is doing. Don’t think of Cling-Surface merely as a material for belts. It is that, but its far-reaching results make it a means to a new method of belt management—the easy or slack method, and that means low friction load, economy of oil, babbitt, belts, fuel, power, time and trouble.

Get a package therefore and test it—severely.

WOOL DYEING.
By Walter M. Gardner, F. C. S.,
Director of the Department of Chemistry and Dyeing of the Municipal Technical College, Bradford, England;
Editor of the Journal of the Society of Dyers and Colorists.

[IN TWO PARTS.]
The only books on Wool Dyeing ever published, written by the greatest authority on the subject.

PART 1 explains the Chemistry with reference to Dyestuffs, Chemicals, Water, Soap, etc., also a
thorough description on the process of Wool Scouring, Bleaching of Wool, etc.

PART 2 treats of the Natural and Artificial Dyestuffs, as well as the Theory and Practice of
Dyeing.

Among the Natural Dyes are explained the Coloring Principle, Coloring Master, and Application of Logwood, Redwoods
(soluble and insoluble); Madder; Cational, Kermes, Lac-dye; Orchil, Calf, and Allied Coloring Master; Yellow Dyes; Weld,
Quassia Bark and Plant; Peru Red, Benzoin, Red; Yellow Fustic, Old Fustic, Ternate, Quaco, Cutch, Gamblo; Indigo; etc.
The Artificial Dyestuffs include the Classification and Application of Coal Tar Dyes; Artificial Mordant Dyes; Acid Mordant
Dyes; Acid Dyes; Direct Dye; Dyes Insoluble in Water; Basic Dyes; Dyes Applied by Oxidation, Reduction, and other Special
Processes; Metallic Dyes; etc.

Price $5.00 for both books including postage to any part of the world.

Perfect Fast Black for Hosiery

I offer the trade the following specialties that I manufacture exclusively for the FAST BLACK DYERS UPON COTTON HOSIERY:

FIRST:—My Latest Improved Sanitary Fast Black in Liquid Form ready for instant use. This black is so compounded that it will stand the highest degree of heat of the summer without the least tendering the goods after they have been given the bleaching finish and let off in the open room. This black will oxidize and lime quickly and permit the filling of the oxidizing rooms three times in 24 hours on the same length when room is of good size, and not less than two times in 18 to 20 hours in boxed-in-machine.

SECOND:—My New Compound Liquid Trichromate, far better than the Bichromate now used by all fast black dyers. With this new product the fast black dyers can make their black ungreenable if they so desire, because it is much richer in chromium and oxygen than the Bichromate, as can be seen by their chemical formulas, which is for the Bichromate Cr2O7, and for the Trichromate 15Cr2O7 or one more chromium and three oxygen, which make it one-third stronger than the Bichromate. This oxygen acting upon the green oxidized aniline, makes it ungreenable, which can not be done with the Bichromate. But most important is the fact that no steam is required, as it acts well with cold water, which saves coal and makes the dye-house comfortable.

THIRD:—My Compound Fast Black Fastener and Brightener, to be used either with the Trichromate or the ordinary Bichromate, also in the cold, and which will give a lustre to the goods never before obtained by Bichromate. It is put in the chroma bath, and its action is such that the goods get ungreenable and lustre; indeed, the lustre is such that Egyptian yarn knitted hosiery looks almost as bright as though mercerized yarn was used. Fast Black Dyers will find it an invaluable chemical with which they can produce either shade of black they desire and give their customers a black that will not turn green to acid uratic test.

FOURTH:—My Diamond Softener, already put up for instant use. This softener is better than any soap or olive oil softener made or any other相似 compounds. It is the result of my 24 years' experience in fast black dyeing. It never will stain the boxes or hands of hosiery, it has a pleasant odor and gives a nice finish. It agrees well with any colors as well as fast black.

With the above four compounds the proprietors of fast black dye works or hosiery doing their own dyeing are sure to get good results always, and will not depend upon unskilled less fast black dye. The less dyer will find it very convenient to have his dye and finishing compounds already made up for instant use.

In offering the trade my Latest Improved Sanitary Fast Black Dye in Liquid Form, I mean to allow the use of my Letters Patent, No. 720,447 for the Dyeing Finish free of any royalty, and will give also free of charge all instruction necessary for the dyeing and finishing process, and so long as one uses the fast black dye, he will be permitted the use of the Dyeing Finish Letter Patent free; this privilege, however, to cease when applied to other fast black dyes.

Besides the above specialties, I retain my former business of starting up mills in fast black and colors, dyeing and bleaching, and contracting for complete equipment with or without the dye formula.
Not Only Does It Appear So But Is—TRUE

A tree with blight cannot produce good fruit. No less true is it that wool scoured with strong alkalies (caustic or soda ash) will not produce that soft, lofty effect, or that fine finished product which every mill is striving to get and maintain.

WYANDOTTE TEXTILE SODA

used in connection with strong alkalies for scouring wool, counter-acts that harsh effect which these produce when used alone.

Wyandotte Textile Soda prepares the wool so that it takes the dye uniformly and evenly, giving no trouble from streaks and at the same time imparting a brighter finish and a faster color.

Wyandotte Textile Soda imparts to the cloth that peculiar finished condition which gives distinction and character to your output.

That Wyandotte Textile Soda is well worth your consideration admits of no question. And, as our guarantee protects you against loss, it is good business policy to give this article a trial.

Then place your order with your supply house without delay.
