"Four and One", a new Variation of over-shot Weave.

This month I am introducing an entirely new form of over-shot weaving which I believe many of you will find of much interest and rather unusual in many ways. It has a great many possibilities for practical articles and is quite different in texture than the ordinary over-shot. I have not seen this particular technique written up in any other place. It came to me as I was trying to work out overlapping pattern blocks in large blocks on opposites. The final results were tried out and I am presenting them in the hope you also will enjoy using the pattern.

Characteristics of the Weave. The weave as it is used here has four possible pattern blocks, though of course it would be possible to use only three pattern blocks if one desired. I have called it a "four and one" threading as there are four threads plus one in each pattern block, or five threads really, except where the design changes, then there must be either a four or a six thread pattern block. It is a little tricky to write a threading draft in this weave on account of these particular blocks and care should be used or the weave will look unbalanced. The woven effect gives almost a solid band effect rather than that of separate pattern blocks. This occurs due to the effect of the single thread skips.

Threading Draft on Page 2. Is planned for a modern luncheon set and is also an unbalanced design for a place mat. I first introduced this sort of design planning about two years ago in an effort to get some modern effects in "Summer and Winter" weave, which so many people like to do.

Arrange the threading draft for a warp of 420 threads as follows,-

| Thread the first two heddles double | -4 |
| Then A to B repeated 7 x 8         |  -56 |
| B to C Once                        |  -95 |
| C to D repeated 20 x 8            |  -160 |
| D to E Once                        |  -45 |
| E to F repeated 7 x 8             |  -56 |
| Thread last two heddles double    |  -4 |

Total 420 warp threads.

This is planned for 7 spools of mercerized cotton natural warp to be woven on the Simanco loom.

Different materials give different effects in this weave. Figure No.5 below shows a threading draft at 45° and 90° for use by any of my students. Loom space for a square mat. Weft used was linen dress fabric for pattern, with light blue linen for plain weave. The small borders were repeated on each end, with duties for the mats woven in light blue linen. Beginning at the bottom of Figure No.1 use levers as follows: 2x3 - 3x; 3x4 - 3x; 4x1 - 3x. Repeat in same order two times more, then weave center in plain weave, and repeat borders for other end in reverse.

A solid band all across the width of the loom results when alternatives are used. This may have a fine plain weave between each shot if desired. This is not shown on the sketch below.

Figure No.5 can be used as a border or any one of the sheds can be repeated for the center of a place mat. The latter will give a very interesting effect that is different. Fine grey No.40 per. cotton and peach color 8-strand cotton are especially nice in color. Perma No.40 cotton for pattern with grey or plain weave also looks very nice. Notice we have been using several colors together for effect. The effects if color is carefully chosen, is very subtle. Try No.40 white, grey and gold; or yellow-green, grey and light green, with the plain weave of the same.

If you like heavy mats, try No.5 mercerized cotton tan, with fine linen color or grey for plain weave. Erve as follows: 12 - 2x6; 3x4 - 2x6; 1x4; 7x6; 3x4 - 2x6; 7x6; repeat 14 for 14 inches for center, then 3x6; 1x4; 7x6; 3x4 - 2x6; and 12 - 2x6, with a plain weave for hem. There is a very ribbed effect to this piece, quite different from the finer weave given above.
