Ecclesiastical Weaving

Dossal Curtain Woven by Colonel John Fishback for St. Mark's Episcopal Church, Venice, Florida
The Dossal Curtain
Colonel John Fishback

It is doubtful if any type of weaving is more demanding, or more rewarding, than the designing and production of ecclesiastic pieces. They may vary from a few small pieces in some churches to many elaborate items in others. A study of one or more of the books on ecclesiastical symbols and vestments soon makes it clear that you are dealing with a very big subject with certain well defined rules. Any weaver planning to design and weave for a church should have some knowledge of this subject, and consult the minister, priest or rabbi before beginning.

The material which may be handwoven for the church should be considered in two groups: the many items used in the sanctuary, and the vestments worn by those who conduct the services. As some vestments are very elaborate it is suggested that the less difficult pieces of weaving used in the sanctuary be tried first. These would be bookmarks (generally in pairs) a pulpit and lectern fall and so on. If the church for which you are weaving uses the seasonal colors of the church year each item must be done in each of these colors, white, red, purple and green.

A dossal, sometimes called dorsal, has become an exception to this rule for changing the seasonal colors. In the older books it is pictured and described as a short curtain attached to back of the altar, and just its width. This small dossal was provided in the seasonal colors and changed with the other woven pieces as required by the church calendar. In later years a hanging suspended from the wall back of the altar has been frequently used. It might be eight to twelve feet high, wide enough to extend slightly beyond the altar at each side, and hung to just clear the floor. This is generally spoken of as a dossal curtain.

Such a curtain is the subject of this article and a brief story of the project will serve to illustrate the opening sentence above. At the time the project was first considered I was a member of the vestry at St. Mark’s Episcopal Church, Venice, Florida and a large expanse of plaster wall back of the altar had been bothering me. Because of the high peaked roof nothing small would do, so a rather large dossal curtain appeared to be the answer if the color and pattern were subdued.

Between this decision and the actual hanging of the dossal curtain many sheets of cross section paper were tossed in the wastebasket, various colors were tried and discarded, and several 48 inch samples were woven and held against the wall back of the altar. The final decision was for a 16 thread Summer & Winter unit to be warped on the 16 harness loom and to use all 18 treadles. The first 3 frames would carry the warp ends that made the background and the remaining 13 would be for the pattern. The center panel, which was to hang flat, consisted of large circles with a cross in the middle. For the two side panels, which were to hang in folds, the draft was changed to make an all over design that would match the pattern along the edges of the center panel. All three panels were made 48 inches wide with 24 ends to the inch and woven 12 feet long. The warp and tabby was Lily Art. 114 Mercerized Cotton in Linen Color using 10/2 for the warp and 20/2 for the tabby. The pattern weft was Lily Art. 305 Gold Guimpe. This seems a good place to mention that the grist of warp, tabby and pattern weft together with sett in the reed must be so balanced that the units will be square. When the three panels were put together a band of gold and scarlet was used to cover the two seams, and also to cover the hem across the top. All of
the preliminary work and the careful weaving of these panels was certainly demanding in both time and thought. Now as it hangs back of the altar at St. Mark’s I have a feeling of satisfaction with a weaving project in which I would not change a pick; something that no other weaving has given me.

And now for an understanding of this Summer & Winter unit which should be in mind when planning its use. It makes a very firm material with pattern units that are square if the warp, tabby and pattern weft have been selected with this in mind. These units are large enough to be seen at a distance and the material is reversible. Since working out the problems for the dossal curtain a number of students at Penland have used the draft for church weaving. Depending on the size of the piece, the colors around it, and the effect desired, both sides have been used. For the dossal curtain the gold guimpe predominated in the background and the linen colored warp and tabby in the pattern units. In the weaving done by Mrs. Gordon a different effect was secured by using the other side where the gold stood out in the pattern and the green warp and tabby in the background.

When the threading and treadling of one unit is understood it becomes easy to design by units. A draft for six frames is given here to show how the unit of 16 ends is threaded, and the most often used tie-up. One foot treadles the background using 1-2 & 3 in the same sequence as the threading on frames 1-2 & 3. The other foot treadles the pattern units as desired, singly or in combinations. To square the units treadle 1-2-3 in the order of threading and in pairs except for the first and last treadle 1. This will provide 16 weft picks to the unit and avoid a jog where the units join. The treadling order would be 1 3 3 2 2 1 1 3 3 1 1 2 2 3 3 1 with the first pick of the unit coming from the left on the single 1 and the last pick of the unit from the right on the other single 1. For the pattern treadles use the other foot and follow each weft pick with a tabby pick. When designing for the number of frames on your loom keep in mind that you may have as many pattern changes as you have frames less the three required for background.

This draft was often used in multi-harness patterns by Margaret Bergman. It is certainly one of the best when firmness is desired, and square pattern units that may be arranged in groups to form other squares and even circles if enough frames are available. However, this is not the only threading or tie-up. When you are satisfied with this draft, experiment on paper with the number and threading of warp ends and changes in tie-up. As an example, by changing the tie-up on treadles 1 2 & 3 in this draft to tie the blank spaces, a considerable change will be made in the material.
Church Hangings
Lela Gordon

Ecclesiastical weaving is very challenging to a weaver. When I started making Church Hangings I quickly discovered that you cannot use specific instructions, as different Churches, even in the same denomination, may have quite different needs. In my case, two sets were for Methodist Churches, yet one altar was 44" x 20" with a step arrangement which only allowed for a 4" drop on which to weave symbols, while the other Church had an altar 72" x 30" with no limitation on the depth of the front drop. Also the pulpits were entirely different. One had a flat desk top so that the hanging, or antependium, had to be long enough to cover the pulpit top, while the other one had a 2" drop to the pulpit top and the hanging needed only go over this drop. In the latter case, to hold the hanging firmly in place, I used an ordinary dime store round curtain rod but turned the hooks down (rather than up as normal). The rod, of course, was not visible. In the first instance, I used, in my own Church, double face Scotch tape on the flat pulpit top surface to hold the hanging. This tape is colorless but sticks to the top and the hanging sticks to it. As I change hangings, according to the dictates of the Christian Year, occasionally this Scotch tape is replaced, but I have found it to be most practical.

The first step to be taken in weaving for a particular Church is to consult the Minister or Priest to determine the requirements of that Church, as the colors needed according to the Christian Year, type of cross or other symbol and whether a sheer, medium or heavyweight material would be most suitable. One minister objected to the Greek Cross and wanted only the Latin Cross. In one set I wove a small Greek Cross in the four corners with the large Latin Cross in the center of the pulpit hanging. Naturally these two crosses are the easiest to execute in hand weaving, as they can be loom controlled. However, if you have sufficient harnesses, you can do a cross that is more ornamental, as the Crusader's or Graded, or you can use the laid-in technique for others as St. Andrew's or Budded.
3 PIECE ALTAR, PULPIT AND LECTERN SET
Illustrated on Cover

Warp  Lily Art. 114, Pearl Cotton, Size 10/2, Bottle Green 562
Tabby  Lily Art. 114, Pearl Cotton, Size 20/2, Bottle Green 562
Weft Pattern  Lily Art. 305, Gold Guimpe
Reed  12 dent — 2 threads per dent
Threading  Bergman Technique

Each unit of this pattern is represented by one square of draft containing 16 ends, threaded as follows:

```

</tbody>
</table>
```

For the diamond background treadle as follows — x y y z z x x y y x x z z y y x

For the pattern-treadle the background sequence above with the necessary pattern treadle. Always start units with the single X from the LEFT. Tabby between each pattern pick.

To square the background you will note that the tabby is half the size of the warp. (Warp 10/2, tabby weft 20/2).

Note the reverse tie-up used to make treadling light. The tabby treadle b is the only heavy one. Also note the a b x y z treadles are in the center to facilitate the use of both feet, and those used the least are on the left.

The fringe used on this set is called BULLION (a metallic gold fringe made in France) which matches the shade of the Lily gold guimpe used as pattern weft. This fringe and many other church designs in fringe, trims and emblems can be purchased from the following firm:

Krieg Bros. Religious Supplies
1414 Farmer Street
Detroit 26, Michigan

Prices for the Bullion are as follows:

- 1¼" $3.95 per yard
- 2¼" $6.95 per yard
- 1½" $4.95
- 3" 7.95
- 2¼" 5.95

(4 Squares — 16 Threads each Square, etc.)

Page Six
7 STEP GRADED CROSS (CRACKLE)
Illustrated on Page 5

**Warp**  Lily Art. 214, Mercerized Cotton, Size 20/2, Natural
**Weft Tabby**  Lily Art. 214, Size 20/2, Natural wound with Lily Art. 305, 1/64 Gold
**Weft Pattern**  Lily Art. 114, Mercerized Floss, Old Gold #79

-o indicates incidental thread necessary to maintain a twill sequence

**Weave**  Tabby a, b
Treadle 2, 3, 4, 5, 6, 7, 8  Repeat each of these blocks 7 x
Treadle 1-28x; 8-7x; 1-7x; 2-7x; 3-7x
Treadle 4, 5, 6, 7 and 8 each 7x

This makes a firm fabric. For a heavier material Lily Art. 107, Linen, 10/2 Oyster could be used for both warp and weft (tabby) using Art. 114, Old Gold Floss #79 for weft pattern.

4 HARNESS CROSS (CRACKLE)
Illustrated on Page 5

**Warp**  Lily Art. 215, Fine Weave White
**Weft Tabby**  Same as warp
**Weft Pattern**  Lily Art. 114, Mercerized Floss, Old Gold #79
**Pattern**  Sample Cross in Crackle Weave
**Reed**  15 dent — 3 ends per dent (45 ends per inch)

A represents arms of the Cross
B represents stem of the Cross

It is treadled 2/3 b tabby 2/3 a tabby 42 times
1/2 b tabby 1/2 a tabby 12 times
2/3 b tabby 2/3 a tabby 12 times

GRADED CROSS
Illustrated on Page 5

Warp          Lily Art. 114, Mercerized Cotton, Size 10/2, White
Weft Tabby    Lily Art. 114, Mercerized Cotton, Size 10/2, White
Weft Pattern  Lily Art. 114, Mercerized Floss, Old Gold #79
Reed          10 dent — 2 threads per dent
Threaded      Summer and Winter

Weave 1½” plain weave with 10/2 white
Pattern area above and below the cross — weave 134567a 134567b 3/4 inch
First bottom level of cross — weave 1/3a 1/3b 3x
Second bottom level of cross — weave 137a 137b 3x
Third bottom level of cross — weave 1347a 1347b 3x
Stem of Cross — weave 13457a 13457b 4 1/4 inches
Arm of Cross — weave 137a 137b 9x
Top Stem of Cross — weave 13457a 13457b 17x
Pattern area 134567a 134567b 3/4 inch

The skeleton tie-up permits weaving by pressing two treadles with each foot as needed. (For instance 7 and 1 with the left foot and 3 and 4 with the right foot.) However, if your loom tie-ups are easily changed, it would facilitate the weaving to make the change for each step in the base of the Cross, etc.
