Federal Reserve Bank of New York - Research Analyst Recruiting Team

Each fall we recruit Research Analysts to work closely with the economists in our Research group starting the following fall. Looking for talented seniors to fill these positions.

Research Analysts play an integral role in both the policy and research functions of the Research and Statistics Group. Our economists, whose specialties include banking and payment systems, capital markets, international economics, macroeconomics, and microeconomics, work closely with Research Analysts. Upon leaving the Fed, Research Analysts choose to pursue either graduate school, and are consistently accepted by top programs, or a wide variety of public and private sector opportunities. In recent years, our RAs have gone on to pursue PhDs in Economics or Finance at MIT, Harvard, Stanford, Princeton, University of Chicago, UC Berkeley, and Wharton, among others. Aside from economics, previous RAs have also gone to law and public policy programs at Harvard Kennedy School, Princeton, Yale, and others.

We seek candidates who have records of superior scholarship and academic curiosity. Research Analysts usually come from strong economics, policy, mathematics, or computer science backgrounds, though a major in one of these fields is not a necessity. Successful candidates often have previous research experience, and many are considering careers in economic research, public policy, or other related fields.

In addition, we seek candidates from a wide range of backgrounds that are typically underrepresented in economics. It is important to us that we succeed in recruiting a diverse cohort of research analysts each year. Thus we encourage many students with varying experiences and backgrounds to apply.

Applications are being accepted now until October 15 at http://www.newyorkfed.org/careers/current_opportunities.html.

The Research Analyst position is an unparalleled opportunity to work with a world-class research and policy team.

Note: Information about citizenship and eligibility requirements are provided in the job posting at http://www.newyorkfed.org/careers/current_opportunities.html.
RESEARCH ANALYST
Opportunities for College Graduates

www.newyorkfed.org/research
What Does a Research Analyst Do?

Research Analysts (RAs) have two primary responsibilities:

1. Assisting economists in the analysis of current public policy issues and events
   - RAs help economists conduct current analysis and other short-term research on monetary policy, bank regulation, payments systems, financial markets, and the state of the U.S. and global economies.
   - Current analysis often culminates in reports or presentations to the Bank's president and senior management.

2. Assisting economists in long-term, academically oriented research projects
   - RAs help economists plan and execute long-term research on a wide range of applied and theoretical topics. Many RAs have the opportunity to coauthor scholarly articles with the economists.

Some day-to-day activities include:

- Performing econometric, computational, and analytical research intended for Bank publications as well as academic journals
- Programming in statistical packages, such as SAS, STATA, and MATLAB
- Running financial, banking, macroeconomic, and international forecasting models
- Reviewing and organizing economic and financial data
- Compiling and assessing information from academic journals, market sources, and government reports
- Writing or assisting with reports and presentations on current economic and financial conditions and policy issues
- Developing spreadsheet/web macros and programs to facilitate and improve data manipulation and analysis
- Preparing background materials for and assisting in the formulation of senior management briefings.
What Are Some Advantages of Working Here?

NEAR-TERM BENEFITS
Research Analysts enjoy the benefits of
• Interaction with leading economists and analysts on key policy and research issues
• Eligibility for tuition reimbursement for individual courses, certificate programs, and graduate programs
• Access to resources designed to build business, computer, and writing skills

LONG-TERM GAINS
Research Analysts have gone on to enter prestigious academic programs, receive National Science Foundation and other highly regarded grants, and accept challenging positions in business and banking.

Career steps taken by former RAs include:

MASTER’S PROGRAMS IN PUBLIC POLICY Berkeley, Chicago, Columbia, Harvard, Princeton, Yale

MASTER’S PROGRAMS IN BUSINESS ADMINISTRATION Chicago, Columbia, Harvard, MIT Sloan, NYU Stern, Stanford, Wharton

FEDERAL RESERVE BANK OF NEW YORK Chief of Staff’s Office, Emerging Markets and International Affairs, Financial Institution Supervision, Markets Group, Risk Group

BUSINESS American Express, Cantor Fitzgerald, Facebook, Goldman Sachs, ISI Group, JPMorgan Chase, Morgan Stanley, NERA Economic Consulting, Standard and Poor’s

NONPROFIT ORGANIZATIONS Brookings Institution, Council on Foreign Relations, NBER

LAW AND PUBLIC SERVICE Berkeley, Chicago, Columbia, Harvard, Michigan, NYU, Yale, IMF, Peace Corps

JACOB ADENBAUM
Money and Payments Studies

“Working in Money and Payments Studies has been a fantastic experience! During my time here, I’ve had the opportunity to work with and learn from top-notch researchers and theorists, take graduate math classes at NYU, gain experience with advanced programming and computational techniques, and work on projects ranging from studying monetary transmission mechanisms in short-term financing markets to examining fuel efficiency standards and demand estimation in the used truck market.

But by far the biggest benefit of working in Research at the New York Fed is the group of people I work with. I feel humbled every day to be able to work with the other RAs—absolutely brilliant, engaging, and fun people whom I’m lucky to call my friends. And so many of the economists are deeply invested in the success and growth of their RAs—they’re constantly encouraging us to attend research seminars and to take the time to develop new skills. I can’t imagine a better place to work.”
Areas of Research

Research Analysts join one of the Group’s seven areas, which conduct both policy-oriented analysis and long-term research projects. Most RAs stay in the position for two to three years.

NICOLE DSSAULT
Macroeconomic and Monetary Studies

“What I’ve loved about working as an RA at the New York Fed is the opportunity to engage in economic research on a wide range of topics. In addition to their role in analyzing and driving monetary policy, our economists also explore topics in education, healthcare, and income distribution. I’ve worked on projects examining the impact of the Affordable Care Act on individual debt, how health conditions shape perceptions of well-being, and economic inequality and mobility in the United States.

No matter the topic, the exposure to such high-caliber research has vastly increased my understanding of statistical analysis, data modeling, and economic reasoning. These skills will be invaluable to me as I pursue a career in medicine and clinical research. In any research field you might plan to enter after college, you will need a strong understanding of quantitative analysis and the ability to work with data. The New York Fed allows its RAs to develop these skills while participating in exciting and meaningful work.”

Capital Markets
Focus: asset pricing; financial institutions; market liquidity; the interaction between markets, institutions, and economic fundamentals
Research Topics: links between financial markets and the macroeconomy; estimation of risk premia in stock, bond, and derivatives markets; interaction between financial institutions’ balance sheets and risk premia; financial market stress and the measurement of systemic risk

Financial Intermediation
Focus: behavior, stability, and regulation of banks and other financial institutions; interactions between the financial system, financial markets, and the real economy
Research Topics: financial crises; banks and the real economy; financial innovation; risk management and measurement; financial system regulation and capital requirements; corporate finance and corporate governance; securitization; global banking; household finance and mortgages; restructuring and resolution of failed institutions

International Research
Focus: international trade, finance, and macroeconomic issues
Research Topics: global banks and international transmission; financial crises and trade performance; capital flows and risk sharing among countries; fiscal and monetary policy spillovers; exchange rate effects on prices, labor markets, and investment; forecasting exchange rates and commodity prices

Macroeconomic and Monetary Studies
Focus: monetary policy; national economic conditions; macroeconomic research
Research Topics: monetary policy transmission; monetary policy and the zero bound; monetary policy and learning; sources of inflation dynamics; changes in the inflation-unemployment relationship; goods and services price inflation; the relationships between inflation expectations, forecast dispersion, and uncertainty; methods of determining trend and cyclical productivity growth; changes in inventory dynamics and business cycles; the yield curve and recessions; forecasting using large macroeconomic panels; labor market dynamics; analysis of recent housing price trends; tax changes and consumer spending; DSGE model estimation and forecasting; financial frictions, liquidity, and the macroeconomy; fiscal and monetary policy interaction

Microeconomic Studies
Focus: theoretical and applied areas of microeconomics; labor, public, urban, and health economics; household finance; applied econometrics
Research Topics: analysis of household balance sheets and consumer credit; financial education and household debt; student loans; consumption responses to income and wealth shocks; household expectations and their links to economic behavior; formation and updating of subjective expectations; social interactions; referrals and job market outcomes; skill and locational mismatch in the labor market; education (both K-12 and higher
Research Analysts receive generous tuition reimbursement for coursework and degree programs at nearby universities. In addition, the New York Fed’s strong emphasis on work/life balance helps ensure that RAs have the time they need to pursue coursework in economics, mathematics, statistics, finance, or related fields.

The Tuition Assistance Program has enabled RAs to:

- Earn a master’s degree in statistics (Columbia University) while working at the Bank
- Participate in other degree and certificate programs (New York University and Columbia University)
- Take individual graduate-level classes such as stochastic calculus, probability, statistics, real analysis, linear regression models, time series regression, linear algebra, continuous-time finance, derivative securities, graph theory, and partial differential equations.

"Working as an RA at the New York Fed has truly been a rewarding experience, both personally and intellectually. The work environment is very collaborative among RAs and economists, and the policy work is truly interesting and impactful. For instance, in Financial Intermediation, I work a lot on a stress-test model that forecasts the capitalization of the banking sector as a function of multiple macroeconomic scenarios, allowing for inferences on whether the financial system is stable or prone to undercapitalization. I have also worked on measuring the liquidity mismatch that arises in bank balance sheets, which has led to better tools with which to gauge the liquidity risk within the banking sector. In both policy projects, I help synthesize results in reports that are then read by senior economists and the Bank’s president. These policy projects have also spurred stimulating research questions that I have explored alongside economists who serve as great mentors. As an RA who has benefited from funded graduate mathematics courses, cutting-edge research—that has involved advanced econometrics and complex programming—and seminars where I have witnessed Nobel laureate professors and senior economists tackling pressing issues about the macroeconomy, I can confidently say that there is no better preparation for graduate school than at the New York Fed.”

INTERNATIONAL

MICROECONOMICS

Giacomo De Giorgi, MATTHEW PLOENZKE, and Aminur Rahman. 2015. “Small Firms’ Formalization: The Stick Treatment.” Staff Reports, no. 728, May.

BANKING AND FINANCE

RON YANG
Capital Markets

“I focus on market structure and liquidity provision, particularly in fixed-income and derivatives markets. In Capital Markets, we take the buzz words that you hear on CNBC (“high-frequency trading,” “flash crashes,” etc.) and rigorously examine them using the tools of financial economics. In practice, this means playing with big, beautiful financial data sets on powerful computing clusters.

Aside from our research role, RAs work closely with policymakers at the New York Fed as well as outside agencies. I have collaborated on projects with the U.S. Treasury, the SEC (Securities and Exchange Commission), and the CFTC (U.S. Commodity Futures Trading Commission)—assignments that have exposed me to interesting regulatory questions across many markets.

This integration of research and policy is a unique component of the RA role. Our research yields insights for policy analyses, while our policy experience sparks new directions for research. Our data may stream in by the microsecond, but our perspective extends into the decades.”

**WHEN I WAS AN RA...**

“When working as an RA at the New York Fed has been an enriching and rewarding experience for me. As an RA in the Microeconomic Studies Function, I’ve had the humbling opportunity to work with world-famous economists (and also exceptionally bright RAs!) on several different research and policy projects, in areas ranging from mortgages and household finance to applied microeconomics and education. On a regular basis, I get to work with amazing data sets, attend conferences/meetings with highly influential people, and see firsthand how academic research contributes to policymaking. The RA role here has allowed me to explore my research interests, helped me to refine my economic intuition and analytical skills, and, most importantly, motivated me to keep searching for answers to difficult questions. I am very grateful for my experiences here, and I would strongly encourage anyone interested in economic research or public policy to apply for the RA position.”
