Quora is a group of exceptionally talented people all working together to share and grow the world's knowledge. We believe our progress toward this mission will have a great long-term impact on the world. When people have access to more knowledge, they can make better decisions, find better jobs and do them better, solve problems in their life, raise their families better, and much more. Much of the fundamental work has yet to be done. Low-hanging fruit is everywhere. The vast majority of knowledge is still not on the internet -- that is the opportunity in front of us.

Every intern will have a full-time data scientist as a mentor and weekly 1:1s with their managers to get feedback and ensure things are going well.

To give you a taste of what interns could do at Quora, here are some projects interns have worked on in the past:

- Building predictive models for user engagement
- Constructing Feed features
- Research on statistical methodology of running experiments
- Building tools to visualize how users navigate Quora
- Development on our experiment analysis framework

**Software Engineering Internship**

**Data Scientist Internship**
