

STEM Diversity & Outreach Workshop

Through the STEM Diversity and Outreach Workshop (GWS 397S), students can earn 3 units of academic credit at the 300 level and an engaged learning experience designation for attending a weekly 1.5 hour long course on issues of diversity and social justice in STEM fields and then helping develop and implement STEM programming in local schools for an average of 5-6 hours per week.

During Spring 2017, the course will meet on Monday evenings from 5-6:30pm; additional weekly outreach hours will be determined based on student availability and the needs of our community partners.

Additional information on the program can be found [here](#) and information about typical site placement options can be found [here](#). We are excited to be able to offer site placement options for students interested in a wide variety of STEM fields including engineering, robotics, environmental science, and ecology, as well as science education and outreach more broadly. This is a great opportunity for students who are interested in learning practical skills to foster diversity in STEM fields and who want to help expand science education opportunities for local students.

Interested students can register directly via UAccess by signing up for GWS 397S.
