CSc 110, Autumn 2016

Lecture 7: Graphics

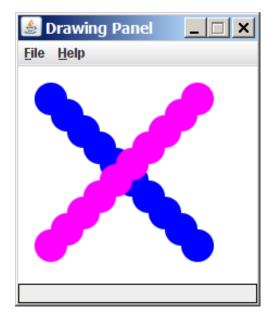

Adapted from slides by Marty Stepp and Stuart Reges

Graphical objects

We will draw graphics in Python using a new kind of object:

- DrawingPanel: A window on the screen.
 - Not part of Python; provided by the instructor. See class web site.

Named colors

000				N	amed colour	chart						1
snow	deep sky blue	gold	seashell3	SlateBlue2	LightBlue3	SpringGreen2	DarkGoldenrod1	branne	pink3	purple1	gray36	gray64

dodger blue	yellow	seashell2	StateBlue 1	LightBlue2	PaleGreen4	goldenrod4	brown3	pink2	Durk Orchid4	gray25	gray63	1.

Custom colors

- You can construct custom colors using hex.
 - # followed by six numbers 0 9 and letters A F
 - A is 10, B is 11 and so on
 - #000000 is black
 - #FFFFFF is white
 - Colors get darker as the number gets lower
 - The first two digits are the amount of red, the next two green, the last two blue

```
panel = DrawingPanel(80, 50, background="#3367D3")
```

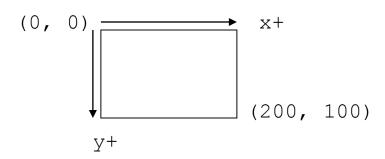

Drawing shapes

```
panel.canvas.create line (x1, y1, x2, y2, fill="color")
       line between points (x1, y1), (x2, y2) in color
panel.canvas.create oval(x1, y1, x2, y2, outline="color")
       outline largest oval that fits in a box with top-left at (x1, y1) and
        lower right at (x2, y2) outlined in color
panel.canvas.create rectangle(x1, y1, x2, y2, outline="color")
       outline of rectangle with top-left at (x1, y1) and bottom right at
        (x2, y2) outlined in color
panel.canvas.create text(X, Y, text="string")
```

text centered vertically and horizontally around (x, y)

Coordinate system

- Each (x, y) position is a pixel ("picture element").
- (0, 0) is at the window's top-left corner.
 - x increases rightward and the y increases downward.
- The rectangle from (0, 0) to (200, 100) looks like this:

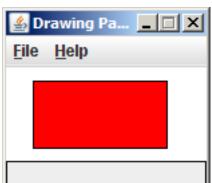

Filled in shapes

• To draw a shape with a fill set its fill instead of outline.

```
from drawingpanel import * # so I can use Graphics

def main():
    p = DrawingPanel(150, 70)

# inner red fill
    p.canvas.create_rectangle(20, 10, 120, 60, fill="red")
```

• This will automatically fill the shape but give it a black border. To remove the border add width=0.

```
p.canvas.create_rectangle(20, 10, 120, 60, fill="red", width=0)
```

Superimposing shapes

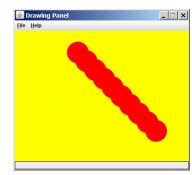

• When two shapes occupy the same pixels, the last one drawn is seen.

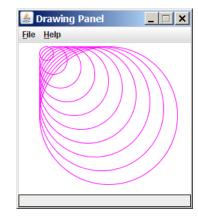

```
from drawingpanel import *

def main():
    p = DrawingPanel(200, 100, background="light gray")
    p.canvas.create_rectangle(10, 30, 110, 80, fill="black")
    p.canvas.create_oval(20, 70, 40, 90, fill="red", width=0)
    p.canvas.create_oval(80, 70, 100, 90, fill="red", width=0)
    p.canvas.create_rectangle(80, 40, 110, 60, fill="cyan", width=0)
```

Drawing with loops

• The x1, y1, x2, y2 expression can contain the loop counter, i.

Loops that begin at 0

 Beginning a loop at 0 and using < can make coordinates easier to compute.

• Example:

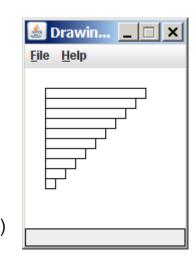

• Draw ten stacked rectangles starting at (20, 20), height 10, width starting at 100 and decreasing by 10 each time:

Drawin... _ 🗆 🗙

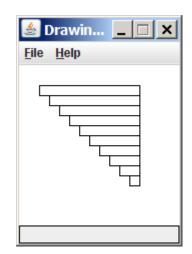

File Help

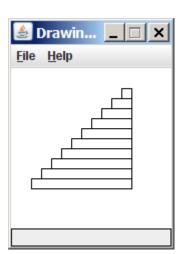

Drawing w/ loops questions

• Code from previous slide:

 Write variations of the above program that draw the figures at right as output.

Drawing w/ loops answers

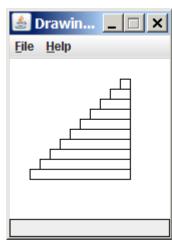

• Solution #1:

• Solution #2:

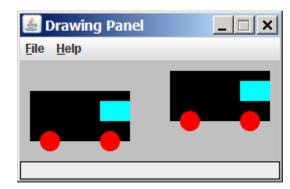

```
panel = DrawingPanel(160, 160)

for i in range(0, 10):
    panel.canvas.create_rectangle (110 - 10 * i, 20 + 10 * i, 120, 30 + 10 * i)
```

Parameterized figures

- Modify the car-drawing function so that it can draw many cars, such as in the following image.
 - Top-left corners: (10, 30), (150, 10)
 - Hint: We must modify our draw_car function to accept x/y coordinates as parameters.

Parameterized answer

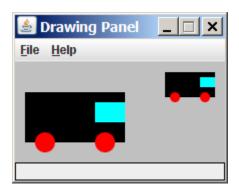

```
def main():
     panel = DrawingPanel(260, 100, background="light gray")
     draw car(panel, 10, 30)
     draw car(panel, 150, 10)
def draw car(p, x, y):
     p.canvas.create rectangle (x, y, 100 + x, 50 + y, fill="black")
     p.canvas.create oval(\mathbf{x} + \mathbf{10}, \mathbf{y} + \mathbf{40}, \mathbf{x} + \mathbf{30}, \mathbf{y} + \mathbf{60}, fill="red", width=0)
     p.canvas.create oval(\mathbf{x} + 70, \mathbf{y} + 40, \mathbf{x} + 90, \mathbf{y} + 60, fill="red", width=0)
     p.canvas.create rectangle (x + 70, y + 10, x + 100, y + 30, fill="cyan",
                                      width=0)
```

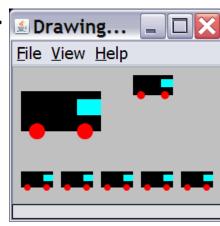

Drawing Panel

File Help

Drawing parameter question

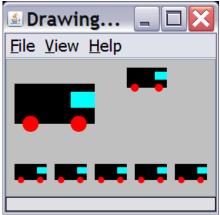

- Modify draw car to allow the car to be drawn at any size.
 - Existing car: size 100. Second car: (150, 10), size 50.
- Once you have this working, use a for loop with your function to draw a line of cars, like the picture at right.
 - Start at (10, 130), each size 40, separated by 50px.

Drawing parameter answer

```
def main():
    panel = DrawingPanel(260, 100, background="light gray")
    draw car(panel, 10, 30, 100)
    draw car(panel, 150, 10, 50)
    for i in range (0, 5):
        draw car (panel, 10 + i * 50, 130, 40);
def draw car(p, x, y, size):
    p.canvas.create rectangle(x, y, x + size, y + size / 2, fill="black")
    p.canvas.create oval(x + size / 10, y + size / 10 * 4, x + size / 10 * 3, y +
                         size / 10 * 6, fill="red", width=0)
    p.canvas.create oval(x + size / 10 * 7, y + size / 10 * 4, x + size / 10 * 9,
                         y + size / 10 * 6, fill="red", width=0)
    p.canvas.create rectangle(x + size / 10 * 7, y + size / 10, x + size,
                              y + size / 10 * 3, fill="cyan", width=0)
```

Animation with sleep

• DrawingPanel's sleep function pauses your program for a given number of milliseconds.

You can use sleep to create simple animations.

```
panel = DrawingPanel(250, 200)
for i in range(1, NUM_CIRCLES + 1):
    panel.canvas.create_oval(15 * i, 15 * i, 30 + 15 * i, 30 + 15 * i)
    panel.sleep(500)
```

• Try adding sleep commands to loops in past exercises in this chapter and watch the panel draw itself piece by piece.
