

# Topic 2:

---

## Logic

# What Is Logic?

---

## Definition: Philosophical Logic

.....

.....

## Definition: Mathematical Logic

.....

.....

# Propositional Logic

---

Propositional Logic is part of Mathematical Logic. Versions include:

- *First Order Logic* (FOL, a.k.a. *First Order Predicate Calculus* (FOPC)) includes simple term variables and quantifications.
- *Second Order Logic* allows its variables to represent more complex structures (in particular, predicates).
- *Modal Logic* adds support for modalities; that is, concepts such as possibility and necessity.

---

## Well-Formed Formulae

---

### Definition: Well-Formed Formula (wff)

### Example(s):

# Why Are We Studying Logic?

---

A few of the many reasons:

- Logic is the foundation for computer operation.
- Logical conditions are common in programs:
  - Selection:

```
if (score <= max) { ... }
```
  - Iteration:

```
while (i<limit && list[i]!=sentinel) ...
```
- All manner of structures in computing have properties that need to be proven (and proofs that need to be understood).
  - **Examples:** Trees, Graphs, Recursive Algorithms, ...
- Even programs can be proven correct!
- Computational linguistics must represent and reason about human language, and language represents thought (and thus also logic).

---

## Simple Propositions (1 / 2)

---

### Definition: Proposition

.....

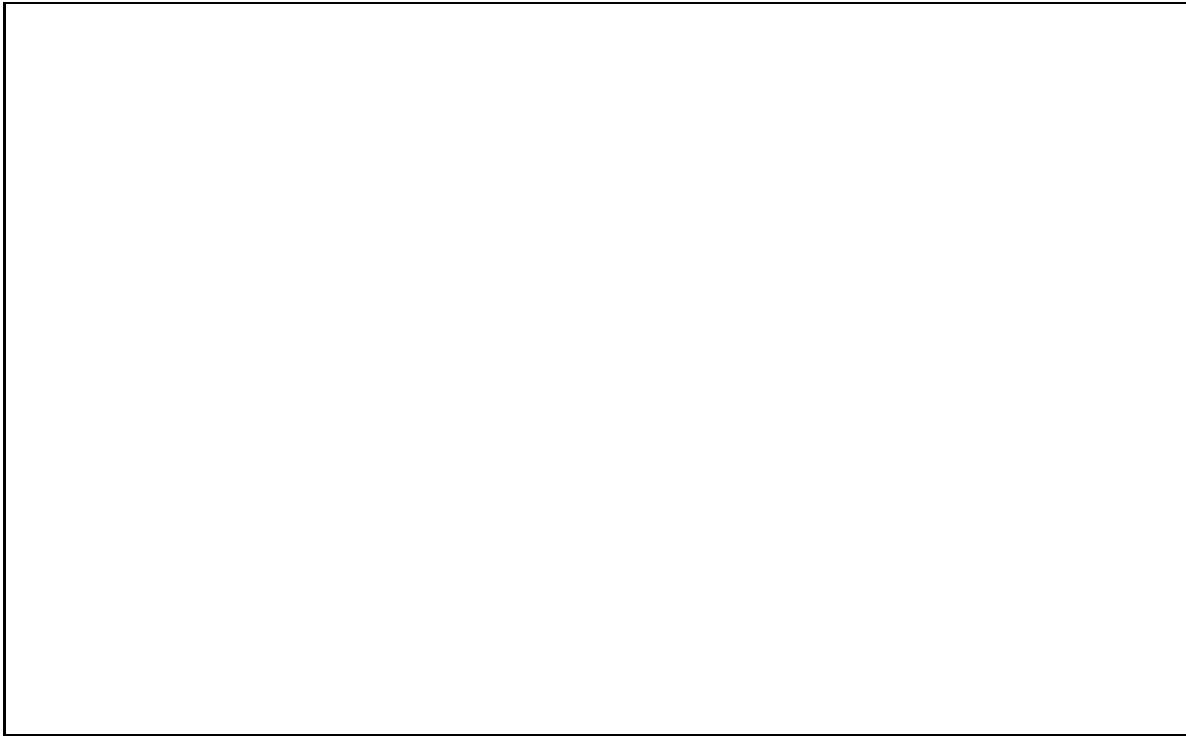

### Definition: Simple Proposition

.....

# Simple Propositions (2 / 2)

---

Example(s):

Logic – CSc 144 v1.1 (McCann) – p. 7/53

# Proposition Labels

---

To save writing, it is traditional to label propositions with lower-case letters called *proposition labels* or *statement letters*.

Example(s):

Logic – CSc 144 v1.1 (McCann) – p. 8/53

# Compound Propositions

---

## Definition: Compound Proposition

And with what do we combine them?

Logic – CSc 144 v1.1 (McCann) – p. 9/53

---

## Conjunctions (1 / 2)

---

Remember ABC's "Schoolhouse Rock" education series?

“Conjunction Junction” (1973)

(Music/Lyrics by Bob Dorough; Performed by Jack Sheldon)

Logic – CSc 144 v1.1 (McCann) – p. 10/53

## Conjunctions (2 / 2)

Conjunctions are:

- compound propositions formed in English with “and” & “but”,
- formed in logic with the caret symbol (“ $\wedge$ ”), and
- true only when both participating propositions are true.

Example(s):

Logic – CSc 144 v1.1 (McCann) – p. 11/53

## Disjunctions (1 / 3)

Consider this compound proposition:

Under which circumstances is that claim true? Possibilities:

1. The first proposition is true.
2. The second proposition is true.
3. Both of the propositions are true.

If all three are acceptable, the disjunction is

\_\_\_\_\_ (     ).

Logic – CSc 144 v1.1 (McCann) – p. 12/53

## Disjunctions (2 / 3)

---

Consider the same example and possibilities:

3 is the number of sides of a triangle or the number of times this class meets per week.

Possibilities:

1. The first proposition is true.
2. The second proposition is true.
3. Both of the propositions are true.

If the third possibility is not acceptable, the disjunction is

\_\_\_\_\_ (     ).

Logic – CSc 144 v1.1 (McCann) – p. 13/53

---

## Disjunctions (3 / 3)

---

**Example(s):**

Logic – CSc 144 v1.1 (McCann) – p. 14/53

# Negation

---

Negating a proposition simply flips its value.

Common negation notations:  $\neg x$   $\bar{x}$   $\sim x$   $x'$

**Example(s):**

**Notes:**

---

## Truth Tables (1 / 2)

---

Truth tables aid in the evaluation of compound propositions.

Structure of a Truth Table:

$p$	$q$	$p \wedge q$	$(p \wedge q) \vee p$
T	T	T	T
T	F	F	T
F	T	F	F
F	F	F	F

# Truth Tables (2 / 2)

Truth Tables of  $\wedge$ ,  $\vee$ ,  $\oplus$ , and  $\neg$ :

NOT ( $\neg$ )	AND ( $\wedge$ )						
<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="border-right: 1px solid black; padding: 5px;"><math>p</math></td> <td style="padding: 5px;"><math>\neg p</math></td> </tr> </table>	$p$	$\neg p$	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="border-right: 1px solid black; padding: 5px;"><math>p</math></td> <td style="border-right: 1px solid black; padding: 5px;"><math>q</math></td> <td style="padding: 5px;"><math>p \wedge q</math></td> </tr> </table>	$p$	$q$	$p \wedge q$	
$p$	$\neg p$						
$p$	$q$	$p \wedge q$					
OR ( $\vee$ )	XOR ( $\oplus$ )						
<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="border-right: 1px solid black; padding: 5px;"><math>p</math></td> <td style="border-right: 1px solid black; padding: 5px;"><math>q</math></td> <td style="padding: 5px;"><math>p \vee q</math></td> </tr> </table>	$p$	$q$	$p \vee q$	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="border-right: 1px solid black; padding: 5px;"><math>p</math></td> <td style="border-right: 1px solid black; padding: 5px;"><math>q</math></td> <td style="padding: 5px;"><math>p \oplus q</math></td> </tr> </table>	$p$	$q$	$p \oplus q$
$p$	$q$	$p \vee q$					
$p$	$q$	$p \oplus q$					

Logic – CSc 144 v1.1 (McCann) – p. 17/53

# Precedence of Logical Operators

Total agreement is hard to come by:

Precedence	Rosen 8/e p. 11	Gersting 5/e p. 6	Hein 2/e p. 351	Epp 1/e p. 24
Highest	$\neg$	'	$\neg$	$\sim$
	$\wedge$	$\wedge, \vee$	$\wedge$	$\wedge, \vee$
$\Updownarrow$	$\vee$	$\rightarrow$	$\vee$	$\rightarrow, \leftrightarrow$
	$\rightarrow$	$\leftrightarrow$	$\rightarrow$	
Lowest	$\leftrightarrow$			

(Note: We'll cover  $\rightarrow$  and  $\leftrightarrow$  soon.)

In this class:

Logic – CSc 144 v1.1 (McCann) – p. 18/53

# Operator Associativity

---

Consider evaluating:  $a = b = -2 * 3 * 7;$  in Python

**Example(s):**

---

# Equivalence of Propositions

---

**Definition: Logically Equivalent**

.....

.....

**Example(s):**

## Natural Language Stmts $\rightarrow$ Propositions (1 / 4)

---

Review: Is There isn't a cloud in the sky a proposition?

**Question:** Is the following sentence a proposition?

Logic – CSc 144 v1.1 (McCann) – p. 21/53

---

## Natural Language Stmts $\rightarrow$ Propositions (2 / 4)

---

**Step 1:** Identify the simple propositions.

Either Walter deposits his mortgage payment or else he will lose his house and move in with Donna.

**Step 2:** Assign easy-to-remember statement labels.

Logic – CSc 144 v1.1 (McCann) – p. 22/53

## Natural Language Stmts $\rightarrow$ Propositions (3 / 4)

---

**Step 3:** Identify the logical operators.

Either Walter deposits his mortgage payment or else he will lose his house and move in with Donna.

**Step 4:** Construct the matching logical expression.

Logic – CSc 144 v1.1 (McCann) – p. 23/53

---

## Natural Language Stmts $\rightarrow$ Propositions (4 / 4)

---

So . . . what's the point? Three examples:

- Expressing Program Conditions
- Natural Language Understanding
- Proof Setup

Logic – CSc 144 v1.1 (McCann) – p. 24/53

# Three Categories of Propositions (1 / 2)

---

## Definition: Tautology

## Definition: Contradiction

## Definition: Contingency

.....

---

# Three Categories of Propositions (2 / 2)

---

**Example(s):** Which of those is  $d \oplus (\neg k \wedge m)$  ?

**Example(s):**

# Aside: Logical Bit Operations in Python/Java

---

Operator	Name	Example (Dec.)	Example (Bin.)
$\sim$	Complement	$\sim 12 = -13$	$\sim 00001100 = 11110011$
$\&$	AND	$12 \& 10 = 8$	$\begin{array}{r} 1100 \\ \& 1010 \\ \hline 1000 \end{array}$
$ $	OR	$12   10 = 14$	$\begin{array}{r} 1100 \\   1010 \\ \hline 1110 \end{array}$
$\wedge$	XOR	$12 \wedge 10 = 6$	$\begin{array}{r} 1100 \\ \wedge 1010 \\ \hline 0110 \end{array}$
$\gg$	Shift Right	$33 \gg 1 = 16$	$00100001 \gg 1 = 00010000$
$\ll$	Shift Left	$33 \ll 2 = 132$	$00100001 \ll 2 = 10000100$

Logic – CSc 144 v1.1 (McCann) – p. 27/53

## Example: Default Linux File Permissions

---

```
$ ls -l
-rw-rw-r-- 1 mccann mccann 3561 Oct 28 1929 stocktosell
```

Logic – CSc 144 v1.1 (McCann) – p. 28/53

# Conditional Propositions (1 / 3)

---

Example:

## Definition: Conditional Proposition

.....

.....

Logic – CSc 144 v1.1 (McCann) – p. 29/53

# Conditional Propositions (2 / 3)

---

In “if  $p$ , then  $q$ ”,  $p$  and  $q$  are known by various names:

Common forms of “if  $p$ , then  $q$ ” (Rosen 8/e, p. 7):

- |  |   |
|--|---|
| ▷ if $p$ , then $q$                    | ▷ $q$ if $p$                            |
| ▷ if $p$ , $q$                         | ▷ $q$ when $p$                          |
| ▷ $p$ implies $q$                      | ▷ $q$ whenever $p$                      |
| ▷ $p$ only if $q$                      | ▷ $q$ follows from $p$                  |
| ▷ $p$ is sufficient for $q$            | ▷ $q$ is necessary for $p$              |
| ▷ a necessary condition for $p$ is $q$ | ▷ a sufficient condition for $q$ is $p$ |
| ▷ $q$ unless $\neg p$                  | ▷ $q$ provided that $p$                 |

Logic – CSc 144 v1.1 (McCann) – p. 30/53

# Conditional Propositions (3 / 3)

---

## Example(s):

Logic – CSc 144 v1.1 (McCann) – p. 31/53

---

## Truth of Conditional Propositions (1 / 2)

---

When should this be considered 'true'?

If you make it through *voir dire*, you will serve on the jury.

The possibilities:

1. Antecedent true, Consequent true; statement is: \_\_\_\_\_.
2. Antecedent true, Consequent false; statement is: \_\_\_\_\_.
3. Antecedent false, Consequent true; statement is: \_\_\_\_\_.
4. Antecedent false, Consequent false; statement is: \_\_\_\_\_.

Logic – CSc 144 v1.1 (McCann) – p. 32/53

# Truth of Conditional Propositions (2 / 2)

---

Not satisfied? Maybe this Python if statement will help:

```
if y < x :  
    temp = x  
    x = y  
    y = temp
```

Logic – CSc 144 v1.1 (McCann) – p. 33/53

## Common Logical Equivalences (1 / 3)

Table I: Some Equivalences using AND ( $\wedge$ ) and OR ( $\vee$ ):

(a)	$p \wedge p \equiv p, \quad p \vee p \equiv p$	Idempotent Laws
(b)	$p \vee \mathbf{T} \equiv \mathbf{T}, \quad p \wedge \mathbf{F} \equiv \mathbf{F}$	Domination Laws
(c)	$p \wedge \mathbf{T} \equiv p, \quad p \vee \mathbf{F} \equiv p$	Identity Laws
(d)	$p \wedge q \equiv q \wedge p$ $p \vee q \equiv q \vee p$	Commutative Laws
(e)	$(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$ $(p \vee q) \vee r \equiv p \vee (q \vee r)$	Associative Laws
(f)	$p \wedge (q \vee r) \equiv (p \wedge q) \vee (p \wedge r)$ $p \vee (q \wedge r) \equiv (p \vee q) \wedge (p \vee r)$	Distributive Laws
(g)	$p \wedge (p \vee q) \equiv p$ $p \vee (p \wedge q) \equiv p$	Absorption Laws

Table II: Some More Equivalences (adding  $\neg$ ):

(a)	$\neg(\neg p) \equiv p$	Double Negation
(b)	$p \vee \neg p \equiv \mathbf{T}, \quad p \wedge \neg p \equiv \mathbf{F}$	Negation Laws
(c)	$\neg(p \wedge q) \equiv \neg p \vee \neg q$ $\neg(p \vee q) \equiv \neg p \wedge \neg q$	De Morgan's Laws

Logic – CSc 144 v1.1 (McCann) – p. 46/53

# Common Logical Equivalences (2 / 3)

Table III: Still More Equivalences (adding  $\rightarrow$ ):

(a)	$p \rightarrow q \equiv \neg p \vee q$	Law of Implication
(b)	$p \rightarrow q \equiv \neg q \rightarrow \neg p$	Law of the Contrapositive
(c)	$\mathbf{T} \rightarrow p \equiv p$	“Law of the True Antecedent”
(d)	$p \rightarrow \mathbf{F} \equiv \neg p$	“Law of the False Consequent”
(e)	$p \rightarrow p \equiv \mathbf{T}$	Self-implication (a.k.a. Reflexivity)
(f)	$p \rightarrow q \equiv (p \wedge \neg q) \rightarrow \mathbf{F}$	Reductio Ad Absurdum
(g)	$\neg p \rightarrow q \equiv p \vee q$	
(h)	$\neg(p \rightarrow q) \equiv p \wedge \neg q$	
(i)	$\neg(p \rightarrow \neg q) \equiv p \wedge q$	
(j)	$(p \rightarrow q) \vee (q \rightarrow p) \equiv \mathbf{T}$	Totality
(k)	$(p \wedge q) \rightarrow r \equiv p \rightarrow (q \rightarrow r)$	Exportation Law (a.k.a. Currying)
(l)	$(p \wedge q) \rightarrow r \equiv (p \rightarrow r) \vee (q \rightarrow r)$	
(m)	$(p \vee q) \rightarrow r \equiv (p \rightarrow r) \wedge (q \rightarrow r)$	
(n)	$p \rightarrow (q \wedge r) \equiv (p \rightarrow q) \wedge (p \rightarrow r)$	
(o)	$p \rightarrow (q \vee r) \equiv (p \rightarrow q) \vee (p \rightarrow r)$	
(p)	$p \rightarrow (q \rightarrow r) \equiv q \rightarrow (p \rightarrow r)$	Commutativity of Antecedents

Logic – CSc 144 v1.1 (McCann) – p. 47/53

# Common Logical Equivalences (3 / 3)

Table IV: Yet More Equivalences (adding  $\oplus$  and  $\leftrightarrow$ ):

(a)	$p \leftrightarrow q \equiv (p \rightarrow q) \wedge (q \rightarrow p)$	Definition of Biimplication
(b)	$p \leftrightarrow q \equiv (p \wedge q) \vee (\neg p \wedge \neg q)$	
(c)	$p \leftrightarrow q \equiv \neg p \leftrightarrow \neg q$	
(d)	$p \oplus q \equiv (p \wedge \neg q) \vee (\neg p \wedge q)$	Definition of Exclusive Or
(e)	$p \oplus q \equiv \neg(p \leftrightarrow q)$	
(f)	$p \oplus q \equiv p \leftrightarrow \neg q \equiv \neg p \leftrightarrow q$	

**Remember:** You **do not** need to memorize these tables ...

... But you **do** need to know how to use them!

Logic – CSc 144 v1.1 (McCann) – p. 48/53

## Applications of Logical Equivalences (1 / 5)

---

**Question:** Is  $(p \wedge q) \rightarrow p$  a tautology? (1)

By use of a Truth Table; we've seen this before:

$p$	$q$	$p \wedge q$	$p$	$(p \wedge q) \rightarrow p$
T	T	T	T	<b>T</b>
T	F	F	T	<b>T</b>
F	T	F	F	<b>T</b>
F	F	F	F	<b>T</b>

Because the expression evaluates to true for all possible arrangements of truth values, the expression is a tautology.

Logic – CSc 144 v1.1 (McCann) – p. 49/53

## Applications of Logical Equivalences (2 / 5)

---

**Question:** Is  $(p \wedge q) \rightarrow p$  a tautology? (2)

Logic – CSc 144 v1.1 (McCann) – p. 50/53

## Applications of Logical Equivalences (3 / 5)

---

**Question:** Is  $(p \wedge q) \rightarrow p$  a tautology? (3)

Logic – CSc 144 v1.1 (McCann) – p. 51/53

## Applications of Logical Equivalences (4 / 5)

---

**Example(s):**

```
if ((games <= 10 || ties > 2) && games >= 11) ...
```

Logic – CSc 144 v1.1 (McCann) – p. 52/53

# Applications of Logical Equivalences (5 / 5)

---

**Question:** Are  $(p \wedge q) \vee (p \wedge r)$  and  $p \wedge \overline{(\overline{q} \wedge \overline{r})}$  logically equivalent?
