Topic 7:

Relations

Background

Having collections of data: Good.

Knowing the connections between collections: Better!

Example(s):

Relations (1 / 2)

Definition: (Binary) Relation

. . . .

Example(s):

Relations (2 / 2)

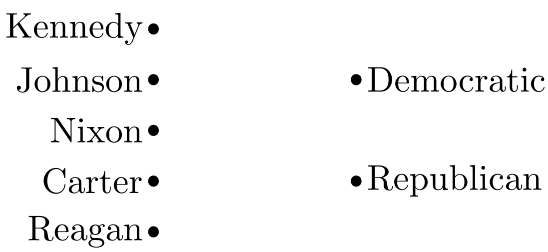
Definition: Related

Example(s):

Graph Representations of Relations (1 / 2)

Example #1: Presidents–Parties

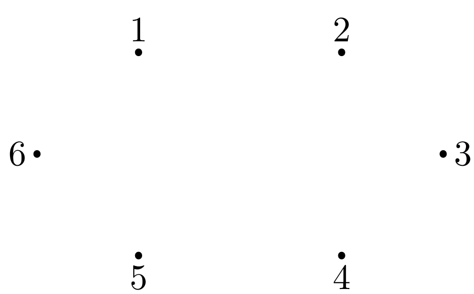
Recall: $A = \{$Kennedy, Johnson, Nixon, Carter, Reagan$\}$
$B = \{$Dem, Rep$\}$
$R = \{$(Kennedy, Dem), (Johnson, Dem), (Nixon,Rep), (Carter, Dem), (Reagan, Rep) $\}$



Graph Representations of Relations (2 / 2)

Example #2: $x \,\%\, y = 0, x \neq y$

Recall: $H = \{1, 2, 3, 4, 5, 6\}$
$R = \{(2, 1), (3, 1), (4, 1), (5, 1), (6, 1), (4, 2), (6, 2), (6, 3)\}$



Properties of Relations: Reflexivity

Definition: Reflexivity

Example(s):

Properties of Relations: Symmetry (1 / 2)

Definition: Symmetry

Example(s):

Properties of Relations: Symmetry (2 / 2)

Example(s): Graph Representations & Symmetry

Properties of Relations: Antisymmetry (1 / 2)

Definition: Antisymmetry

Example(s):

Properties of Relations: Antisymmetry (2 / 2)

Example(s): Graph Representations & Antisymmetry

Properties of Relations: Transitivity (1 / 2)

Definition: Transitivity

Example(s):

Properties of Relations: Transitivity (2 / 2)

Example(s):

Relational Composition Examples (1 / 4)

Three examples of creating relations from relations.

Example #1: Set Operators

Relational Composition Examples (2 / 4)

Example #2: Swapping content of ordered pairs

Definition: Inverse

Relational Composition Examples (3 / 4)

Example #3: Composites

Definition: Composite

Example(s):

Relational Composition Examples (4 / 4)

Example #3: Composites (cont.)

Example(s):

Definition: Complement

Equivalence Relations (1 / 4)

You may have already implemented one in Java...

Definition: Equivalence Relation

Equivalence Relations (2 / 4)

Example(s):

Equivalence Relations (3 / 4)

So . . . why are these called *equivalence* relations?

Recall:

$$R = \{ (0,0),$$
$$(1,1),(1,-1),(-1,1),(-1,-1),$$
$$(2,2),(2,-2),(-2,2),(-2,-2) \}$$

Equivalence Relations (4 / 4)

Definition: Equivalence Class

Example(s):

Partial Orders (1 / 3)

Consider scheduling the construction of a house.

Definition: Reflexive (a.k.a. Weak) Partial Order

Partial Orders (2 / 3)

Example(s):

Partial Orders (3 / 3)

Definition: Irreflexivity (of Relations)

. . . .

Definition: Irreflexive (a.k.a. Strict) Partial Order

. . . .

. . . .

Total Orders (1 / 2)

Definition: Comparable

. . . .

. . . .

Definition: Total Order

. . . .

. . . .

Total Orders (2 / 2)

Example(s):
