

Material for the Final Exam

May 3, 2004

You can use any 2 pages of material.

1. Dynamic memory allocation (malloc, free, pointers etc)
2. Functions pointers.
3. C preprocessor
4. Good things from C++ (as listed in the course slides)
5. gdb (main commands).
6. awk
7. Signal (only signal handlers).
8. The “history” mechanism.
9. Script files.
10. Makefile (only the part that was taught in class).
11. Jobs control. The commands *fg*, *bg*, *jobs*, *ps* etc.
12. Profiling (gprof).
