

CSc 372, Fall 2006

Assignment 6

Due: Tuesday, October 31 at 12:20 MST

Problem 1. (5 points) facts.pl

Create a file `facts.pl` with ten facts, five for a one-term predicate and five for a two-term predicate. The predicates must be something of your own creation; not ones that we've seen in class or one of the well-worn "family" examples like `mother` and `brother`.

Problem 2. (4 points) queries.txt

Create a file `queries.txt` that has a log of a session with Prolog showing eight queries based on your two predicates. Have some variety in them—some should use the first predicate, some the second, some both, and some should use variables.

Deliverables

The list of deliverables is in `/home/cs372/fall106/a6/delivs`.

Use the `turnin` tag `372_6` to submit your solutions.
