**Shuttle-winder.** A device for winding a shuttle, such as the round shuttle of the Wheeler and Wilson sewing-machine, or a tatting-shuttle, as in the example. The shuttle is attached to a clamp and rotated above the spool; the spring which serves to carry and revolve the shuttle also forces its jaws open to receive the thread. See also **Bobbin-winder**, Figs. 755, 756, pages 317, 318.
