

```
int number = 1, next = 1, turn[1:n] = ([n] 0);
process CS[i = 1 to n] {
  while (true) {
    turn[i] = FA(number,1);      /* entry protocol */
    while (turn[i] != next) skip;
    critical section;
    next = next + 1;             /* exit protocol */
    noncritical section;
  }
}
```
