1 Introduction

The purpose of this assignment is to familiarize yourself with Prolog.

Every predicate should be commented. At the very least, the comments should state what the predicate does, which arguments it takes, and what result it produces.

You should make your predicates as simple and elegant as possible.

You will be graded primarily on correctness, elegance, clarity, and documentation.

This assignment is graded out of 100. It is worth 5% of your final grade.

2 Magic Squares

Write a predicate magic(B) which takes a board (a 3 × 3 grid) and succeeds if all rows, all columns, and the diagonals sum to 15: [10 points]

| ?- magic(board(2,7,9,5,1,4,3,8)).
yes
| ?- magic(board(2,7,9,5,1,4,3,7)).
no

A board is represented by a structure like this:

board(A,B,C, % First row
D,E,F, % Second row
G,H,I) % Third row

Your predicate should start like this:

magic(board(A,B,C,D,E,F,G,H,I)) :- ...

You don’t need to check that all the entries on a board are unique.
3  Prolog Arithmetic

1. Write a predicate abs(X,Y) which takes a number X as input and computes the absolute value |X| as output: [10 points]

    | ?- abs(0,0).
    yes
    | ?- abs(-1,1).
    yes
    | ?- abs(-1,Y).
    Y = 1
    | ?- abs(5,Y).
    Y = 5

2. Write a Prolog predicate seq(First, Last, N) that instantiates N to each integer value from First through Last, inclusive. First and/or Last may be negative. Assume that First and Last are integers. Examples: [20 points]

    | ?- seq(1, 3, X).
    X = 1 ? ;
    X = 2 ? ;
    X = 3 ? ;
    no

    | ?- seq(-3, 2, X).
    X = -3 ? ;
    X = -2 ? ;
    X = -1 ? ;
    X = 0 ? ;
    X = 1 ? ;
    X = 2 ? ;
    no

    | ?- seq(1,1,X).
    X = 1 ? ;
    no

    | ?- seq(2,-2,X).
    no
4 Parts List

Consider this database of facts, describing what something is made up of: [30 points]

\[
\begin{align*}
\text{has(bicycle, wheel, 2).} \\
\text{has(bicycle, handlebar, 1).} \\
\text{has(bicycle, break, 2).} \\
\text{has(wheel, hub, 1).} \\
\text{has(wheel, spoke, 32).} \\
\text{has(bicycle, frame, 1).} \\
\text{has(car, steering_wheel, 1).} \\
\text{has(car, stereo, 1).} \\
\text{has(car, tires, 4).}
\end{align*}
\]

Write a predicate \texttt{partof(X,Y)} that succeeds if \(Y\) is a part of \(X\):

\[
\begin{align*}
| ?- \text{partof(wheel, spoke).} & \text{ true} \\
| ?- \text{partof(bicycle, spoke).} & \text{ true} \\
| ?- \text{partof(car, spoke).} & \text{ no}
\end{align*}
\]

\texttt{partof(X,Y)} can also be used to enumerate the parts that make up an object, or of which an object is a part:

\[
\begin{align*}
| ?- \text{partof(bicycle,X).} & \text{ X = wheel ? ;} \\
& \text{ X = handlebar ? ;} \\
& \text{ X = break ? ;} \\
& \text{ X = frame ? ;} \\
& \text{ X = hub ? ;} \\
& \text{ X = spoke ? ;} \\
& \text{ no}
\end{align*}
\]

\[
\begin{align*}
| ?- \text{partof(X,spoke).} & \text{ X = wheel ? ;} \\
& \text{ X = bicycle ? ;} \\
& \text{ no}
\end{align*}
\]
5 Dating Database

You are running a computerized dating service and maintain a database consisting of the following facts:

\% name, gender, height(cm), age, education (hs, college, masters, phd))
person(lisa, female, 180, 30, phd).
person(jenny, female, 167, 25, hs).
person(bob, male, 180, 40, phd).
person(charles, male, 190, 30, masters).
person(arnold, male, 177, 29, hs).

You know from experience that a woman will only date a man if

1. he is at least as tall as she is,
2. his educational level is at least as high as hers,
3. he is not younger, and no more than 10 years older than her.

For the purposes of this assignment we assume that women will date only men and men will date only women.

1. Add these facts

    educated_less(hs, college).
    educated_less(college, masters).
    educated_less(masters, phd).

    to your program and write a recursive rule educated_le(A, B) that succeeds if the educational level A is less than or equal to B: [15 points]

    \| ?- educated_le(hs, hs).
    yes
    \| ?- educated_le(hs, college).
    yes
    \| ?- educated_le(hs, phd).
    yes
    \| ?- educated_le(phd, masters).
    no
2. Write a Prolog predicate `dateable(Female, Male)` which encodes the dating rules above\(^1\): [15 points]

```
| ?- dateable(lisa, charles).
no
| ?- dateable(lisa, bob).
yes
| ?- dateable(jenny, arnold).
yes
```

6 Submission and Assessment

The deadline for this assignment is noon, Tue Oct 20. It is worth 5% of your final grade.

You should submit the assignment electronically using d2l.arizona.edu.

---

\(^1\)Every assignment really should contain a Seinfeld quote, shouldn’t it? So, here goes, from *The Wink*:

- **Jerry:** Elaine, what percentage of people would you say are good looking?
- **Elaine:** Twenty-five percent.
- **Jerry:** Twenty-five percent, you say? No way! It’s like 4 to 6 percent. It’s a twenty to one shot.
- **Elaine:** You’re way off.
- **Jerry:** Way off? Have you been to the motor vehicle bureau? It’s like a leper colony down there.
- **Elaine:** So what you are saying is that 90 to 95 percent of the population is undateable?
- **Jerry:** UNDATEABLE!
- **Elaine:** Then how are all these people getting together?
- **Jerry:** Alcohol.
